Executive Summary

This report was produced as by the Marin Economic Forum with joint funding provided by the City of Sausalito and the Sausalito Chamber of Commerce. The report provides the City of Sausalito, its policy makers, residents, and business owners with economic data, insight and guidance concerning Sausalito's economic evolution.

Sausalito as a Place to do Business

Over 77 percent of companies in Sausalito are non-retail firms. Sausalito businesses annually generate over \$1.2 billion of business revenue; Sausalito businesses generate about 5 percent of the income made by Marin County businesses, and employ about 2.5 percent of the workforce in Marin County. Professional services, such as architecture, engineering, legal, accounting, specialty design, and other consulting, generate over \$388 million per year in business revenue, and employ over 1,290 workers in Sausalito. Retail and related services (bars, restaurants, hotels, and tourism activities) annually generate over \$82 million in business revenue, while employing over 1,100 workers. As of 2010, more than one-fourth of all businesses in Sausalito were operated out of homes (mainly personal services and consultancies). This report's data show how the demand for goods and services produced by Sausalito companies are connected to each other economically. The data also show how utilizing vacant commercial space for non-retail businesses affect the incomes of retail and related businesses. Seeing Sausalito as a place where retail, restaurant and recreation spending generates the majority of Sausalito's commerce is a misperception due to the strength of the non-retail sector as described above.

Residents, Tourists and Commuting Workers All Demand Sausalito Goods and Services

Sausalito companies employ approximately 5,000 people who live outside Sausalito city limits; over 93 percent of the people that work in Sausalito are in-bound commuters. Census 2010 data state that Sausalito's median age is 51.1 years, while Marin County has a median age of 44.5. Of the 4,112 occupied housing units in Sausalito in 2010, 49.2 percent are rented; Marin County has 36.9 percent of its housing stock currently rented. The Marinship area is home to most of Sausalito's businesses and workers across a wide breadth of industries. Local workers and businesses, like tourists, are potential income for all Sausalito businesses. Workers and businesses demand goods and services while in and operating Sausalito, which makes empty hotel rooms, restaurant tables, and boat slips similar to vacant commercial real estate. Over 3,000 people are employed in businesses in the Marinship; the commuting

data imply that most of these workers do not live in town. This report's data provides a planning tool to analyze the effects of utilizing commercial space of all types on Sausalito overall in terms of employment, business revenue and tax generation.

Retail and Related Industries: Connected to Non-Retail Companies and Commercial Space

Sausalito's businesses, especially its retail and related industries, serve residents, local workers and tourists. The retail mix is relatively broad in Sausalito; grocery stores generate 7.9 percent of retail business revenue in Sausalito, while miscellaneous goods stores, gas and service station sales, clothing and jewelry stores, and business-to-business retail sales, are approximately 60 percent of all other retail revenues. Sausalito, as do other small towns through Marin County, relies on its proximity to retail centers in Marin County and San Francisco for retail breadth. A recent commercial real estate inventory suggests retail space is available in Sausalito; retail has a 7.5 percent vacancy in the city as of January 2011¹.

Retail and related services provide sales tax revenues. In 2010, Sausalito collected \$1.23 million in sales tax revenues. Sausalito has a little over 11 percent of Marin County's transient occupancy tax collections in sum, collecting over \$780,000 in overnight taxes in fiscal year 2009-10. Any leakage in retail implies lost sales tax revenue for any city. However, an important aspect of Sausalito's business mix is the fact that non-retail businesses generate business for retail and related services because of additional employees and demand locally as they grow. The largest tourist event coming to Sausalito in the short term is the America's Cup. All retail and related services will be affected, as well as many non-retail businesses. A recent report by the Bay Area Council Economic Institute (2010) suggests that more than \$1.698 billion in new business revenue to the entire Bay Area, with effects on Sausalito in both retail and non-retail industries, from America's Cup.

Non-Retail Companies and the Marinship: Sausalito Business Opportunities

Advertising, professional and technical services, sound recording businesses, investment banking, and specialty design firms are major industries within Sausalito's Marinship area. The Marinship is where most of Sausalito's excess capacity exists in terms of commercial real estate;

¹ See the study (referred to as the Short-Term Business Needs Study in this report) at <http://www.ci.sausalito.ca.us/Index.aspx?page=750>.

according to data from recent surveys of commercial space, the Marinship has mostly business office vacancy². The Marinship’s waterfront provides commercial activities and productive capacity for Sausalito to utilize, including empty boat slips. This report’s data provide a way to compare firms that enter vacant space and estimate the effects of the company’s entry on Sausalito overall. The marine industry, by independent research reports, data and anecdotes from marine-based businesses in Sausalito, looks to be in decline. However, utilizing vacant commercial space and niche businesses in marine, such as environmental design, mechanical design and research firms, may draw more support for the marine industry overall. When vacant square footage is occupied, the types of companies that enter vacant space determine the additional benefits for Sausalito’s other businesses.

The Economic Impacts of Non-Retail Demand

The importance of vacant commercial space as an asset waiting to be utilized, regardless of location, cannot be overstated. The economic impacts of vacant spaces depend on the income and employment generated from their use. This report’s data estimates the economic benefits, which can then be converted to a per square foot metric, comparing new and expanding companies in Sausalito for the biggest bang for buck among an array of options to enter currently vacant, commercial space.

Table EX-1: Selected Non-Retail Businesses and Economic Impacts
\$1 million of new business revenue generates new...

	Employment	Business Revenue	State/Local Taxes
Industrial Design/Architecture	9.9	\$1,563,000	\$30,800
Sound Recording	17.5	\$1,900,000	\$29,000
Light Manufacturing	7.4	\$1,418,000	\$29,700
Ship/Boat Repair and Service	5.2	\$1,408,000	\$30,300
Computer Software and Design	9.2	\$1,478,000	\$32,000
Boat Slips	13.1	\$1,523,000	\$86,000
Environmental Design (Green Design)	11.4	\$1,532,000	\$29,700

Data provided in this report connect non-retail businesses to other businesses in Sausalito economically. Table EX-1 provides estimated data, where each business in the first column is assumed

² In addition to the Short-Term Business Needs study referenced in Footnote 1, the City of Sausalito also published “Marinship Land Use Study” in April 2011. This report is available at the Sausalito Community Development Department and at <http://www.ci.sausalito.ca.us/Index.aspx?page=695>.

to generate \$1 million of new revenue and then generate new employment, new business revenues and new state/local taxes from economic activity that follows in Sausalito; these data also work in reverse if businesses are lost for various reasons. Appendix I shows further details on how certain retail industries gain in indirect and induced ways from growth of non-retail businesses.

To use the economic impact data to estimate the economic benefits of a new or expanding firm in Sausalito, the following five steps should be taken:

1. Identify the type of firm in Tables 3A, 4A, and 5A of Appendix I;
2. Estimate the annual, new revenue for Sausalito from the new or expanding company;
3. Divide that new revenue by \$1 million and multiply by the numbers in Tables 3A, 4A and 5A for the new or expanding firm's industry;
4. The results are estimates of new business revenue, employment and tax revenue generated by the company in question; and
5. Take the square feet of newly occupied space and divide into the impacts to obtain a square foot metric for decision making.

Multiple companies can be compared and contrasted using these data in planning considerations for economic and community development.

Opinion is Mixed about Sausalito Businesses

Open forums held in 2010 and 2011 provided opportunities for local residents and business owners to come and talk about the city economy, city issues, and Sausalito's future. A confidential and anonymous survey was also made available, and every mailing address in Sausalito was sent a postcard with the survey's website and timeline for responses. We received 461 responses, an 8.3 percent response rate. Residents suggested that business growth creates increased traffic, but also creates obvious financial benefits for the city and its local businesses. Sausalito's grocery stores and personal services companies were most frequented by residents shopping in town; there were some opinions provided for an expansion of grocery store availability or a local market selling local goods. Business owners were optimistic about increased tourism and its benefits, as well as increased non-retail business in Sausalito. Many of the survey respondents were long-time residents of Sausalito; over 72 percent of the businesses that responded had been operating for more than five years. For residents, over 79 percent of respondents said they were over 45 years of age. Individual and group meetings

suggested similar themes as found in the survey results. Business owners and residents both gave strong opinions about parking issues for themselves and customers, frustrations with local government and the time it takes to complete projects that require government action (permits, etc.), car and bike traffic that was becoming more dangerous, and a need for more focus on business issues and support for local businesses. No one type of retail or non-retail firm stood out as a “must have” by those interviewed; many are concerned about how to generate both a healthy business environment and preserve the historical aspects of Sausalito’s waterfront.

Action Plan:

Commercial vacancy and economic impact data can be used in support of the following set of goals, tasks and actions. An overt partnership (the Partnership) including the Sausalito Chamber of Commerce, the City of Sausalito, and interested residents should be built to advertise and facilitate the tasks below.

Goals, Tasks and Actions on an annual cycle:

- **Discuss and decide what incentives the City, landlords, and other businesses can provide new firms to be courted, if any, as part of annual budget cycle for City of Sausalito;**
- **Enlist local, commercial real estate brokers and agents to provide quarterly data on commercial real estate to City of Sausalito Finance and Public Works Departments for planning purposes;**
- **The City of Sausalito integrates commercial real estate data and economic impact estimates into the preparation of the City’s budget and capital improvement planning for city infrastructure;**
- **Include how industries in Sausalito would be affected by infrastructure improvements, in terms of both new revenues and additional costs, in planning reports; and**
- **The Partnership should inform residents, business owners and city elected officials and staff about these new and expanding companies in Sausalito, those that leave, why they left, and, their economic impacts on the city.**

On-going goals, tasks and actions:

- **Focus on niche, non-retail businesses and advertise Sausalito as a home for these firms:**
 - **Internet software, mobile device software, and other specialty software design;**
 - **Environmental design, architecture and other applied arts based on what exists in Sausalito already;**
 - **Sound recording and other fine arts should be supported due to their relatively large economic impacts; and**
 - **Marine industries that complement other industries in the Marinship and throughout Sausalito (design and education).**
- **Retail and related industries (restaurants, bars, hotels, tourism activities) should actively market to new firms that come into vacant, commercial real estate to generate new demand for their goods and services; and**
- **Develop metrics for monitoring change, such as: number of square feet vacant in different use categories and different parts of Sausalito (downtown, Caledonia, Marinship); growth of transient occupancy tax (TOT) and restaurant-specific sales tax revenues; growth of home-based businesses; and tracking ferry riders coming to Sausalito for tourism versus work.**

1. Introduction

This report provides a database for decision making by both city government and business leaders in Sausalito³. Business attraction is about marketing why a business should locate in Sausalito; business retention is about supporting local businesses once they open locally. This report focuses on the demand for commercial real estate as a way to forecast business needs in the city, and target specific types of businesses to fill vacant space. This report provides a regional perspective on Sausalito's economy, specifically its role as a gateway to Marin County. The data provide planning tools for city government and capital planning; alternative scenarios generate local tax revenues. Qualitative data are also provided from a confidential survey available to all Sausalito residents and businesses during July 2011. This report provides a suggested action plan and timeline to guide local decision makers. In short, data show the current demand and potential for Sausalito's business community, using a combination of data sources, commercial real estate inventories, and economic impact measures to guide Sausalito's economic future.

This report was commissioned by a partnership of the City of Sausalito and Sausalito Chamber of Commerce. Its scope was to provide data to identify the current mix of businesses; identify industries that are missing, have recently left the area, or are not in the city but may be located in adjacent areas and provide services demanded by Sausalito residents. The use of economic impact analysis shows which industry gaps provide the most "bang for buck"; the economic impact analysis, combined with the latest economic and commercial real estate data, to provide a vision of business attraction and retention. Non-retail industries are the largest portion of Sausalito's economy in terms of businesses and employment. Retail and related industries (restaurants, bars, hotels, tourism activities) provide local options for residents, businesses and tourists, capturing local taxes rather than exporting tax dollars due to retail and business leakage. Tourism in any municipality has two components: pleasure and business. Local workers that live elsewhere demand retail and personal services as do pleasure tourists, but may be more related to business or the flow of a work day. It is important that any community and economic development strategy going forward recognize local connections between

³ MEF would like to thank the City of Sausalito, the Business Advisory Committee (BAC), and the Sausalito Chamber of Commerce for their edits, comments and advice. All errors are the authors' and not the above groups. Please contact Marin Economic Forum at info@marineconomicforum.org for more details on this report.

non-retail and retail industries where pleasure tourism is just one part of the economy; Sausalito has over 5,000 people that come to work in the city daily but do not live in Sausalito.

The Marinship provides the best setting for Sausalito to grow and enhance its business opportunities⁴. The waterfront areas of Sausalito are homes to industrial, commercial and recreational marine businesses. The waterfront areas also attract visitors and are enjoyed by local residents. The Marinship also has a large amount of commercial space that is related to the waterfront by location, but perhaps not by business use. The connection of Sausalito to its non-retail industries is strongest in the Marinship. For Sausalito to preserve its marine heritage, it must use other businesses to help support and complement the marine industry. Business may demand marine education for leadership training or use tours and travel by boat for recreation. Environmental design firms may interact with local boat builders on marine designs that use renewable resources. Legal, accounting, advertising, and human resource management firms may also provide services to the marine sector. Also, marine art businesses may use studios and galleries in Sausalito as a partnership to promote Sausalito's waterfront. Commercial vacancies and economic impact data can be used to plan for the effects of filling vacancies on all businesses in Sausalito. This includes the effects of filling empty boat slips, hotel rooms, and restaurant tables that would naturally benefit from enhanced business activity in the City overall, where the Marinship generates the greatest amount of that activity.

Interviews and survey responses of business owners, residents, and employees of local businesses (where employees may not be Sausalito residents), provide qualitative data that may help shape public policy in three ways: interviews provide opinions about attitudes toward local business, the need for and effects of change, as well as community and economic development; the opinions provide a way to track behavior, such as where residents shop, what customers use local firms, and what businesses are focused on for future growth; and the qualitative data offer input from all stakeholders concerning Sausalito's business and residential environment that other data sources would not provide.

This report is split into five sections.

- Sausalito's current business mix;

⁴ The boundary of the Marinship is generally along Sausalito's Richardson's Bay waterfront, between Bridgeway (street addresses 1750 - 4000), 300 Napa Street (Galilee Marina) to the south and Gate 5 Road on the northern boundary (city limits). See the Waterfront and Marinship (WAM) report for more information at the following website: <http://www.ci.sausalito.ca.us/Index.aspx?page=621>.

- Retail industries, Sausalito residents and businesses, and tourism;
- Analysis of the non-retail industries, including the Marinship's businesses and marine industries;
- Interviews and survey results summary; and
- Conclusions and action plan.

2. Sausalito's Current Business Mix

While casual observers may consider Sausalito's economy primarily based on retail or tourism, the demand for Sausalito's businesses lies in its non-retail firms. Sausalito is a services-based economy, where the bulk of those services are non-retail. An important strategy issue for the city is to track in-bound consumers, pleasure tourists and workers that come to Sausalito daily, their demand patterns and how they could be serviced more completely by local companies. The data in this report can show how workers at certain businesses will demand slightly different retail and personal services. The demand for non-retail firms connects to retail services throughout the city, a point shown quantitatively later in this report through the economic impact analysis of Section 4.

A mix of retailers services both tourists and residents; the large portion of Sausalito's economy is in various personal and professional services. Figures 1 and 2 provide a comparison of Sausalito's business mix to Marin County⁵. Some industries immediately jump out of these charts. The first is the professional, technical and scientific services industry. Sausalito has a larger proportion of its firms in this industry than the rest of Marin County and may want to further look at that industry as a target for filling vacant commercial space.

Second, the "Other Services" category represents the largest proportion of businesses in Sausalito. It is comprised of companies that are otherwise unclassified, home-based businesses and employment (including private household staff) of various types, and organizations that are focused on civil or social goals (non-profit organizations). Bars and restaurants in Sausalito show some relative strength versus the rest of Marin County. Figures 1 and 2 also show the diversity of Sausalito's industries, suggesting that the demand for businesses in Sausalito is far wider in breadth than just tourism and residential support services and retail.

Sausalito should utilize its location and assets as optimally as possible. This report will later discuss commercial real estate's current use and vacancies, and how that fits professional/technical/scientific and other non-retail services well. Also, Sausalito's location suggests that bars, restaurants and hotels can thrive and draw new business to Sausalito as others fail. The recent and lingering economic downturn is the likely cause of some business closures and vacant commercial real estate in Sausalito. Marin County overall has also lost businesses, as has most of the nation.

⁵ These industry breakdowns are based on the North American Industry Classification System (NAICS), Level 2 codes. See <http://www.census.gov/eos/www/naics/> for more on NAICS codes and classifications. The "Level 2" codes are the highest level of aggregation, and represent industrial sectors like manufacturing, retail, and professional services.

Figure 1: Business Mix in Sausalito, 2010, Percent of Total Companies

Sources: Employment Development Department of California (EDD), City of Sausalito, Census Bureau

Unfortunately, the recent recession left few companies and industries unaffected. For Sausalito, some firms left the city since 2005; 2005 is arguably the peak of the last business cycle. Figures 3 and 4 provide a perspective on how Sausalito lost and regained companies by industry and how the rest of Marin County also lost companies respectively. The raw numbers provide a way to consider the actual flow of companies versus percentage changes. Home-based businesses, as tracked by city business licenses in Sausalito, represent a broad base of industries, mainly personal and professional services. In short, Sausalito has done relatively well since the recession, further reflected in relatively low commercial vacancy rates (as discussed in other sections of this report) As of 2011, the breakdown of these services were approximately 45 percent personal services, 24 percent consulting, 13 percent artists, 6 percent other professional services, and 12 percent sales.

Figure 2: Business Mix in Marin County outside of Sausalito, 2010, Percent of Total Companies

Sources: EDD, City of Sausalito and Census Bureau

Also, the number of professional and technical services companies, such as research, scientific and technical firms, increased. These are firms with large multiplier effects, firms that have a large economic impact on other firms such as retail, restaurants, and personal services⁶. This study now looks at the economic impact idea and why it is an important tool for Sausalito's economic evolution beginning with the estimated, current business mix data.

Business Mix Data, Community and Economic Development

Sausalito looks like a professional, technical and scientific hub for Marin County given the employment and businesses in these industries within Sausalito in comparison to Marin County. Restaurants also seem to be a place where workers can find jobs and firms can survive. The waterfront may act as a location factor to attract businesses and customers as well. Linking this data to the

⁶ See section 4 of this study for more on the economic impact of a sample of non-retail firms.

commercial real estate data discussed below is a key element of community and economic development. Sausalito shows demand trends in specific industries and this data acts as a way to show the types of firms that are attracted and retained (this is the importance of looking at the data over time) in Sausalito.

Figure 3: Net Change in Number of Businesses by Industry, 2005-10, Totals for Sausalito

Source: EDD, City of Sausalito and Census Bureau

Figure 5 shows the number of firms in Sausalito by industry and the estimated business revenue generated in 2010. An intriguing aspect of Figure 5’s data is the “Other Services” category, which represents jobs such as private household staff, non-profit organizations, and other personal services (hair and nail salons, shoe repair, tailors). Notice the amount of business revenue versus the number of firms in the Other Services category. In many cases, a residence is a “business” in the Other Services category, due to hiring a personal chef, in-house staff, or full-time child care.

**Figure 4: Net Change in Number of Businesses by Industry, 2005-10
Marin County outside Sausalito**

Source: EDD, City of Sausalito and Census Bureau

Table 1 provides employment by sector, using 2009 data at the industry level and overall employment data for Marin County and Sausalito from the Employment Development Department of California (EDD); the 2010 figures are estimated from regional data from the Census Bureau and the total employed in Sausalito at the end of 2010 by EDD⁷.

⁷ For cities of Sausalito's size, official data at the industry level generally lags about 18 months. However, EDD does report summary statistics for Sausalito on a monthly basis. See www.tinyurl.com/labormarketinfo and search for Sausalito for more data. Appendix I, Table 1A provides data from 2009 for further reference.

Figure 5: Business Revenue and Firms in Sausalito, 2010 Estimates
Business Revenue in Millions of \$, Number of Firms by Industry

Source: City of Sausalito and Zip Code Business Patterns, Census Bureau

The demand for commercial real estate leads to a demand for other goods and services. An economic impact analysis becomes a demand-driven model by investigating what firms provide the largest “bang for buck” in utilizing currently available commercial property. If there is a demand to do business in Sausalito from a specific industry, and commercial space is available, the type of business that enters commercial space has multiplier (economic impact) effects on other businesses and can guide which companies will receive additional revenue from increased demand due to the new or expanding companies, including companies that already exist in Sausalito⁸.

⁸ See <http://www.ci.sausalito.ca.us/Index.aspx?page=695> for documents pertaining to the Imagine Sausalito process. See <http://www.seagroup.org/> for information on Sausalito Environmental Action (SEA).

Using Economic Impact Analysis and the Business Mix

It is critical to understand the relationship between the generation of jobs, business revenues and tax receipts for local government to engage in long-term economic planning for Sausalito. The data of this section show estimates of how industries in Sausalito contribute to the city's economy. Like dropping a rock into a pond, an industry's expansion has ripple effects on a local economy and beyond based on new jobs created⁹. The IMPLAN[®] model allows us to look at municipalities and counties worldwide to analyze the employment, revenue, wage, and tax effects of economic events and model possible futures for Sausalito¹⁰. The economic impact model has three classifications, summing to a total effect. The **direct** effects are those specific to the event. For example, suppose a new ship repair firm enters the Marinship and takes over an otherwise empty commercial space. Subsequent

⁹ The analyses are specific to Sausalito zip codes (94965, 94966). The 94966 zip code covers any post office box businesses that are technically "business residents" of Sausalito and thus counted in business count statistics at the Bureau of Census and the Employment Development Department of California (EDD).

¹⁰ See www.implan.com for more information on the model and its use.

operations of these companies, hiring new employees for example, generates direct effects on local employment, tax and business revenues. Figure 6 shows the ripple effect idea of the multiplier process.

Figure 6: Economic Impact Concept

Indirect effects come from these workers and businesses taking their new income and spending a portion of that money on other businesses' goods and services. This revenue flow to other businesses leads to more employment, wages, revenues, and taxes. For example, when a newly-hired ship repair employee goes out to eat at a local restaurant, she creates indirect effects from the original expansion; another example is when a restaurant uses a larger amount of a local linen cleaner's services than before, which creates indirect effects. These additional jobs and revenues then create induced effects. The **induced** effects are similar to the indirect effects, but come from indirectly-affected workers and firms and their economic gains. For example, a new linen-service worker, hired due to the restaurant's expansion described above, may go to the grocery store, dry cleaners, or the doctor's office more often, which induces growth in retail sales, employment and taxes. The sum of these effects is the total or overall economic impacts¹¹. Tables 2, 3 and 4 show the business revenue, the employment, and indirect tax revenue multipliers for Sausalito and Marin County sorted by the types of companies with the largest multipliers specific to Sausalito.

¹¹ The 2009 data are shown in Appendix I as the baseline for the most current, available data for all three of these variables (employment, companies count, and business revenue). The data in Table 1 and Figure 5 are estimated from these data and the history of these variables. Tables 1A and 2A in Appendix I provide data on the levels of employment, companies and business revenue by industry in Sausalito and Marin County for 2009.

Table 2: Business Revenue Multipliers, Selected Industries

Industry	Type of Company	Sausalito	Marin	Difference
Publishing and Computer Software	Sound recording industries	1.90	2.15	0.25

New business revenue implies more demand for other businesses and thus more revenue, the essence of the multiplier effect. Table 2 shows these effects from selected types of companies with the largest business revenue multipliers for Sausalito. A changing business mix can mean more jobs for either local residents or for commuting workers. The more people that work in Sausalito, the more potential spending that takes place on retail, restaurants, and other industries. Table 3 provides the top ten industries concerning job creation as more demand for those industries takes place. An increase in the number of businesses operating in Sausalito means more tax revenue for the city. An increased number of businesses and workers spending money in Sausalito implies more retail sales and more tax revenue. Table 4 provides the top ten firms in Sausalito from which indirect business taxes are derived.

Table 3: Employment Multipliers, Selected Industries

The idea of indirect business taxes are that a business, by its operations, generates taxes for the local municipality, state and federal governments without their operations being directly taxes. Sales taxes are a tax on consumption, and the retailer is merely the entity that collects those taxes for the local and state government, as an example. What a city like Sausalito retains from those tax revenues, including property taxes, transient occupancy taxes (TOT), sales taxes, and other fees, depends on the current tax laws and rates. Appendix I has tables that provide the full breadth of planning data to forecast the effects of specific companies currently in or coming to Sausalito.

Table 4: Indirect Business Tax Multipliers, Selected Industries¹²

Using Tables 2 - 4 and Their Data

In their raw form, the data within Tables 2, 3 and 4 (and in Tables 3A, 4A, and 5A in Appendix I) are based on an additional \$1 million of new revenue generated by these businesses, the additional jobs that \$1 million of new business revenue would create, or the new tax revenue created by \$1 million of additional business revenue. Using Table 2, \$2 million dollars of new revenue for an investment banking firm that moves into an office space in the Marinship is estimated to generate \$3.24 million in revenues throughout the city, including the original \$2 million. Other businesses would see an additional \$1.24 million in revenue or demand for their products and services due to the investment banking's rising demand or entry into currently vacant office space. Using Table 3, an increase of \$500,000 of revenue in a local fitness center would lead to approximately 13.75 new, full-time equivalent employees for those firms (1/2 of \$1 million x 27.5). Using Table 4, \$1,000,000 of new

¹² The indirect tax data should be seen as the estimated effect on the local area (Sausalito only) as a result of that industry generating \$1 million in new business revenue. This is from the direct, indirect and induced effects combined as discussed above.

revenue at a local grocery store has an estimated increase of \$180,000 in government revenue for Sausalito. The same algebra holds for demand increases in industries for Tables 2 through 4 and Tables 3A through 5A.

It is important to recognize these multipliers also work in reverse. If a business is about to leave Sausalito, the cost of that change can also be estimated through these multipliers. Later in the report, we will discuss matching vacant real estate to determine an optimal mix of businesses, balancing between the effects of a new business on existing local business, fiscal budgets, and increased employees in Sausalito. Sausalito can use these data to compare and contrast demand for an array of businesses.

Summary of Current Business Mix and Economic Impact

There is a strong non-retail element in Sausalito that acts as the foundation for future business entry in the city. These data show how to use the economic impact analysis in this report for planning. When a new business comes to Sausalito, depending on the type of business it is, there are specific, additional effects on other businesses in Sausalito due to enhanced demand. The amount of new revenue a new business brings to Sausalito determines an estimated level of new employment, additional revenue for other businesses, and new tax revenue for the city government. Appendix I provides detailed tables on specific businesses that link to other parts of this report. To understand the retail and related services sectors more completely, understand some new data on Sausalito's residents and the commute patterns of local workers to add breadth to that perspective.

3. Retail Industries, Sausalito Residents and Businesses, and Tourism

This section describes how Sausalito's retail and related industries are demanded, and how tourism connects to retail. These data provide the City of Sausalito, in conjunction with the multipliers discussed above, a way to consider retail businesses dynamics, and also to understand the impact a changing mix of retail services demand. Retail and related services (restaurants, bars, hotels, tourism activities) demand should be seen as "pulled" by local growth in other industries rather than be seen as Sausalito's economic engine. Retail demand is a by-product of residential incomes, tourism flows and local business activity. This section provides summary data about local residents, based on recent data from Census 2010, tourism data for Marin County and Sausalito, and how workers that commute to Sausalito are also "tourists" and add to the demand for local retail and related services. Local businesses and workers, which also shop and dine throughout Sausalito, also demand retail and related services like pleasure tourists and local residents.

Census 2010 Summary: Residents

The Census 2010 data is available; Table 3 summarizes Sausalito and Marin County for comparison purposes. There are some noteworthy census items for Sausalito concerning local demography and the evolution of both resident and business needs in terms of retail and other locally-serving businesses. The population of Sausalito is 7,061 residents per Census 2010. The median age in Sausalito is 51.1 years, where Marin overall is 44.5 years (Census 2010). Households are smaller in Sausalito (1.7 people on average) than the County overall (2.4); only 8.7 percent of Sausalito's population is under 18 years old; Marin County has 21 percent of its population under 18 years old overall (Ibid). Figures 7 and 8 are population pyramids; these figures should look like an Inca ruin in that the younger population provides a local workforce for local jobs and as a base for retail and related services. Figures 7 and 8 show, as compared to Marin County, that Sausalito is a relatively older community¹³.

The Census 2010 data has housing data, specifically data about the type of occupancy for these units. According to Census 2010, Sausalito has 4,536 housing units, of which 424 were counted as

¹³ See www.census.gov for more data from Census 2010 for Sausalito, and also check Marin Economic Forum's website for the Census data.

vacant, a 9.3 percent vacancy rate¹⁴. Marin County outside of Sausalito has 7.1 percent vacancy. Of the 4,112 occupied housing units in Sausalito, 50.8 percent of these units are occupied by the owner.

Figure 7: Population Pyramid, Sausalito, Census 2010 Data

Source: Census 2010 (<http://factfinder2.census.gov/main.html>)

For Marin County otherwise, Census 2010 reports 63.1 percent of the 99,098 housing units occupied are lived in by the owner. This census does not include commercial properties. Also, there is more data to come from Census 2010 to compare Sausalito to Marin County and the greater Bay Area, specifically income and employment data. Tables 6A through 8A in Appendix I provide comparison stats for Sausalito versus the remainder of Marin County.

¹⁴ Local real estate professionals that specialize in commercial, multi-family home properties suggest that the Census 2010 estimate is too large. See <http://factfinder2.census.gov/main.html> for more information and tables 6A through 8A in Appendix I.

Figure 8: Marin County Population Pyramid, Census 2010

Source: Census 2010 (<http://factfinder2.census.gov/main.html>)

Residents and Workers in Sausalito: Where They Live and Work

The Longitudinal Employment and Housing Dynamics (LEHD) database of the Census Bureau provides data on the flow of workers and residents in and out of Sausalito daily. These data suggest that Sausalito is a place where people live but do not work in Sausalito; over 93 percent of the workers in Sausalito live outside of Sausalito. Table 5 provides summary data on where Sausalito’s workers live and where Sausalito’s residents work. Appendix I provides a more complete data set for Sausalito concerning the working population in Table 9A.

Table 5: Sausalito's Commute Patterns and Locations, 2009, Total Employees and Residents

Workers in Sausalito			Working Residents of Sausalito

Retail Characteristics of Sausalito

Sausalito's retail and related services demand comes from a mix of residents, pleasure tourists and commuting employees. Marin County outside Sausalito provides complementary retail goods and services to those available within Sausalito. San Francisco also provides a large array of retail, albeit with an opportunity cost of bridge tolls, ferry rides, parking, or lost time in traffic. Tourists coming to or through Sausalito spend money on retail and related services much like residents do, but may also purchase hotel stays.

Sausalito should generate more overnight stays in hotels to enhance not only revenue for those business owners, but to add another day in which visitors, in any form, will demand more goods and services in Sausalito. Some basic ideas guide us through this section's data to guide and task business attraction and retention efforts concerning retail and related services:

- Resident retail is difficult to differentiate from tourist retail for many businesses given the flow of both pleasure and commuting employees into Sausalito daily;
- Data about tourism in Marin County, may provide additional guidance for business attraction and retention;
- The economic impacts between retail demand and non-retail businesses need to be considered in both directions (this report provides data on the types of businesses affected by the growth of retail revenues and how affecting the growth of non-retail businesses affects retail); and

- There is a trade-off between Sausalito residents spending some portion of their income outside Sausalito, which is known as “retail leakage”, and space availability to expand retail options in Sausalito based on commercial real estate availability.

The data on retail sales at the city level are generally estimated from taxable transactions, which the City of Sausalito tracks to estimate sales tax receipts. Table 6 summarizes estimated data from city retail sales data and data available from 2010; Appendix I provides a more complete set of data on retail industries and their impacts. What these data show are the proportions of each retail sector, the bar and restaurant sectors, and the hotel industry in comparison to the whole of Sausalito’s economy, as measured by the total demand for goods and services, retail and non-retail. These are compared to similar numbers for Marin County¹⁵.

**Table 6: Composition of Retail Services in Sausalito,
Percent of Total Employment, Business Revenues, Estimated for 2010**

Retail Category: Sausalito	Est. Employment Sausalito		Est. Business Revenue Sausalito	
	Workers	% of Retail	Revenue	% of Retail

Total Retail Industry in Sausalito	355	100.0%	\$65,142,000	100.0%

Sources: City of Sausalito, IMPLAN® and Census Bureau

Focusing on retail’s various categories, we see in Table 7 that retail is concentrated in Sausalito to grocery/convenience stores, clothing, hobby/sporting goods retail, and a large amount of miscellaneous. Comparing these categories to Marin County, we see that Sausalito is very heavy on “miscellaneous” retail than Marin County overall. These data point to Marin County as acting as a

¹⁵ See www.bls.gov for more details on industry categorizations at <http://www.bls.gov/iag/home.htm>.

complementary retail source to Sausalito’s retail mix. For Marin County, there is larger participation by building supply stores, auto sales and auto parts stores, and clothing; there is also more balance across the retail sectors.

**Table 7: Composition of Retail Services in Marin County
Percent of Total Employment, Business Revenues, Estimated for 2010**

Retail Category	Marin County		Sausalito	
	Employment	Business Revenue	Employment	Business Revenue
Motor vehicle and parts	9.1%	10.0%	6.1%	1.9%

Sources: City of Sausalito, IMPLAN[®] and Bureau of Economic Analysis (BEA)

Tables 6 and 7 provide a way to compare Sausalito’s retail sectors to Marin County as a whole; Sausalito’s retail sectors service a large amount of tourist and commuting worker demand versus Marin County overall. Both areas have a broad array of retail (as evident in the miscellaneous category); Sausalito has a smaller concentration of electronics and clothing retail than Marin County otherwise. Recent commercial real estate surveys provide some data about the current state of space for retail.

Short-Term Business Needs Study and Retail

The Short-Term Business Needs (STBN) Study, published in January 2011, examined the physical inventory of retail, office and industrial space throughout the city¹⁶. Its purpose was to determine the current mix of retail industry businesses in Sausalito and to assess the current, commercial real estate vacancy situation (STBN, 2011). Reported vacancies provide a sense of the excess capacity and room for expansion within Sausalito. For retail, this is most relevant in downtown Sausalito and the Caledonia

¹⁶ See the STBN Study at <http://www.ci.sausalito.ca.us/Index.aspx?page=750>.

Street area¹⁷. The STBN Study assessed vacancies in three industry areas: retail, office/design, and industrial. The authors of the STBN Study suggested that the information on vacancies will assist in determining if a public-private, joint leasing effort would be productive.

In retail, there were 241 parcels identified in the study throughout Sausalito. Several vacancies reported are "special situations"; 18 retail vacancies were reported overall, for a 7.5 percent vacancy rate out of the 241 addresses identified as retail units. In terms of retail space, a 7.5 percent vacancy rate is relatively strong. Cassidy-Turley BT Commercial (CTBT) tracks retail vacancies throughout the Bay Area as part of their market research. As of the first quarter of 2011, which is the same timing as the STBN Study, CTBT reports that retail vacancies in Marin County are under 5 percent; however, most of the retail space in Marin County outside of Sausalito is in shopping centers (Terranomics, 2011). Sausalito's vacancy percentage is based on 18 vacant parcels as of January 2011. In contrast, Sausalito's office space has a vacancy rate of approximately 10.9 percent, where Marin County overall had a vacancy rate of 19.9 percent¹⁸. We will reference the STBN report again when looking at non-retail industries in Section 4.

The square feet of space available is not as important as the type of space available, which will determine the type of retail business that occupies the space. Once the type of retail business to occupy a currently vacant space is determined, an algorithm that shows the economic benefits per square foot can be determined. In using the economic impact data below, the retail vacancies dictate to those engaged in business attraction and retention a set of possible, new retail firms that can enter Sausalito's market. Table 10A shows Marin County's retail market from 2007 to 2010 as a guide to Marin County's retail sector evolution.

The Economic Impact of Retail on Sausalito's Economy

Table 8 provides economic multipliers to analyze an expansion of retail and related industries. Notice the relatively large number of workers needed to generate \$1 million of retail revenue and that the business revenue multipliers are similar across the major retail categories and that the business-related taxes generated by these firms is also similar and relatively large. The logic is the same as used above in Section 2 for Tables 2 through 4. If a motor parts retailer were to buy or lease an available

¹⁷ The STBN Study did not take into consideration marine vessels that act like commercial space and derive revenue for land-based businesses that also use capital floating on the water. The boat slips themselves could be seen the same way as empty office/rental/commercial space and are discussed later in this report.

¹⁸ A commercial site, Loopnet (www.loopnet.com), provided additional data on office/design space in the STBN Study. Marin County data overall is from Cassidy Turley BT Commercial Research (see www.ctbt.com).

retail parcel in Sausalito, it may forecast generating \$1,000,000 of revenue the first year. From the data in Table 8, that implies there will be at least 13 new workers in Sausalito, that Sausalito businesses overall will generate \$1,500,000 in new business revenue (including the new company) and the city of Sausalito will generate \$180,000 in revenue based on new taxes generated by the \$1,500,000 of new business revenue throughout the city. That logic holds for any new retailer identified in one of the categories of Table 6. Related industries to retail, such as restaurants, bars and hotels are also included in Table 8. Notice hotels have a more robust effect on tax revenues due to their multiplier effect (which generates sales, property, business license, and other taxes and fees), and also generates transient occupancy tax (TOT) revenue. In the case of grocery stores, \$1 million of revenue generates a little over 14 jobs and \$180,000 in tax revenue for Sausalito; it also generates an additional \$510,000 for other businesses¹⁹.

**Table 8: Retail and Related Industry Multipliers, Overall Effects of \$1 million in new revenue
Employment, Business Revenue and Tax Revenue**

Industry	Employment	Business Revenue	Indirect Tax
General merchandise	19.95	1.51	0.18
Furniture and home furnishings	13.38	1.51	0.17
Grocery Stores	14.24	1.51	0.18
Sporting goods, hobby, books, and music	18.72	1.51	0.18
Hotels	14.01	1.51	0.24
Building material and garden supply	11.65	1.50	0.18

Miscellaneous retail	26.68	1.49	0.17
Health and personal care	14.92	1.48	0.17
Gasoline stations	5.59	1.46	0.16
Direct and electronic sales	15.19	1.44	0.17
Bars and restaurants	18.12	1.44	0.09

Sources: City of Sausalito, IMPLAN[®] and Bureau of Economic Analysis (BEA)

Table 8's data provide a way to analyze an empty hotel room's effect on Sausalito's economy, or an empty restaurant table. For a hotel or restaurant owner or manager, if an empty hotel room or reduced number of turns for tables at a restaurant takes place, this has an effect on the city economy as a whole. Table 8 (and Tables 12A and 13A in Appendix I) provides some simple algorithms to watch

¹⁹ The top ten businesses affected by grocery stores in terms of indirect and induced effects on other companies' business revenues are shown in Table 11A in Appendix I.

what other types of companies are affected by changes to hotel occupancy and bars/restaurants. Restaurants generate an additional \$440,000 for every \$1 million of revenue they create approximately and \$86,100 of tax revenue as well. For hotels, \$1 million of new revenue creates 14 new jobs, \$510,000 of business revenue for other companies, and approximately \$240,000 in business-related tax revenues. Converting an empty hotel room or empty restaurant table to an amount of revenue lost and using these data in reverse can also provide a way to state the importance of these industries to the local economy through what is lost by their excess capacity, similar to vacant commercial real estate. Also, notice the similarity of these industries to each other in terms of their effects on Sausalito. These retail or related industries also are connected to tourism, which is discussed in more depth below.

Tourism’s Economic Effects on Sausalito as Expanded Retail

With over 5,000 workers coming daily to Sausalito from places other than within Sausalito itself, a broader view of tourism encompasses any "consumers" that are transient in Sausalito and may demand retail and related services. For example, Sausalito could utilize the waterfront more completely in terms of a business tourism destination. This could come in the form of sailing schools, leadership training using sailing, and corporate retreats or meetings. Pleasure tourism’s economic impact on a local economy is mainly in hotels, restaurants and retail; visitors purchase goods, services, and experiences whether they come for pleasure or business. As with any city or place where pleasure tourists come, there is also a natural flow of non-traditional “tourists” that come for business reasons daily.

**Table 9: Pleasure Tourism Industry Impacts on Sausalito
Overall Effects of \$1 million in revenue on Employment, Business Revenue**

Industry	Employment	Business Revenue
Hotels	14.01	1.51
Museums, historical sites, and parks	8.7	1.53
Recreation Activities	10.3	1.56
Other amusement and recreation industries	12.0	1.54
Scenic/Tourism Transportation	9.65	1.41
Bars and Restaurants	18.12	1.44

Sources: City of Sausalito, IMPLAN® and Bureau of Economic Analysis (BEA)

The bar and restaurant data in Table 9, which is also true of retail services data, is an example of data that mixes servicing residents and servicing tourism; these data are difficult to use in terms of discovering and estimating pleasure tourism’s benefits as distinct from local workers and businesses

demanding similar goods and services. Tourism data in Sausalito does not exist in one place and does not specifically track any type of traveler to the city, which would mix ferry traffic, bus traffic, commuting employees, bicyclists, and visitors otherwise.

Some regional metrics exist at county, state and national levels. The state of California suggests that Marin County received \$744 million in tourism revenue in 2008, which has likely fallen since then. Transient occupancy tax receipts (TOT) alone do not accurately depict the breath of tourism currently operating Sausalito, but provide some gauge. Sausalito has the highest TOT tax rates in Marin County, charging 12 percent of the room rate for overnight stays in local hotels/motels. Table 16A in Appendix I provides data for Marin County and selected cities and towns from 2001 to 2009 for TOT receipts. It is important to recognize that TOT receipts are a metric for overnight stays and not for overall tourism. It is one metric, and one that provides a large amount of government revenue per unit of sale²⁰. However, overnight stays in Sausalito imply restaurant and retail demand otherwise²¹. We now look at the flows from ferry traffic briefly as metrics to assess tourism flows to Sausalito in general.

Ferry Traffic

The Golden Gate Ferry ridership provides another way to examine tourism flows, using San Francisco as a source for travelers. This data set is another mix of pleasure tourism and those that come as workers to Sausalito otherwise. The number of tourists might be estimated looking at ridership on time-specific ferries during the day and on weekends. Golden Gate Ferry provided day-by-day ridership from the Ferry Building to Sausalito runs from July 1, 2003 to Feb 28, 2011. Assuming ferries between 10am and 4pm, as well as ferries after 6:30pm are mainly tourists on weekdays. Table 10 shows a comparison of commute to tourism flows to Sausalito via the Golden Gate Ferry²². Table 10 shows an inflow of potential demand for Sausalito's businesses.

²⁰ See Marin County Visitor's Bureau (2011) at www.visitmarin.org. In Marin County, a Business Improvement District (BID) exists for the financing of the Marin County Visitors Bureau (MCVB), which is now at 2 percent of member TOT receipts. Not all of Marin County's hotels, motels, and TOT collectors are within the BID, which is used to enhance the promotion of Marin County tourism specific to member properties.

²¹ See Appendix I, Figure 17A for a breakdown of tourism spending in Marin County on average from 2001 – 09 from Dean Runyan Associates (2010).

²² See Figure 19A in Appendix I for the percentage in ridership on Golden Gate Ferry comparing Larkspur's to Sausalito's runs. The recession effects are part of the 2007 and after reduction in ridership.

Table 10: Estimated Sausalito Commute versus Tourism Ferry Visitors from San Francisco Annual and Daily Estimates, 2004-10²³

Annual Visitors	2004	2005	2006	2007	2008	2009	2010
Commute	82,321	87,197	94,895	99,244	101,185	96,148	97,198

Source: Golden Gate Ferry and MEF

Table 10 provides assumed commute versus tourism flows using the ferry from 2004 to 2010. There are the daily averages and annual averages using ferry runs before 9am and runs that land in Sausalito after 5pm but before 7pm as “commute” runs; the remainder runs are considered tourism. A conversion of daytime pleasure tourists to overnight stays increases business and overall tax revenue dollars that Sausalito businesses and city government retains from the flow of tourism. Empty hotel rooms and restaurant tables are like vacant commercial space. . Also, attracting business and "conference" customers to local hotels and restaurants should be complemented by local conference space or viable partnerships with regional conference spaces where businesses would stay in Sausalito and meet elsewhere or in town. These data, like TOT receipts, should be considered and monitored in tracking tourism.

The coming of America’s Cup will likely affect Sausalito more than any other city in Marin County and showcases how tourism affects other industries in Sausalito beyond retail.

A Note on America’s Cup

The America’s Cup event is estimated to bring as much as 11,000 jobs and \$1.698 billion to the Bay Area economy, as well as over \$107 million in tax revenue for the state and local governments,

²³ The annual data come from the raw data from Golden Gate Ferry, and converted to commute and tourist by assuming that Monday through Friday specific runs were for workers or commute (before 9am and then between 4-6pm), and all else were tourist trips. The daily figures used 260 work days (52 weeks x 5 days a week) for commuters and 362 days for tourists (assumes three holidays where the ferry does not run). Also, these figures are divided by two to represent the same person returning on the ferry. . These data do not differentiate those that come by bike or foot into Sausalito and then take the ferry.

according to a 2010 report by Bay Area Council Economic Institute (BACEI, 2010)²⁴. Among other pursuits concerning Sausalito's business attraction and retention, it is important for Sausalito to see America's Cup as an opportunity to implement long-term changes to infrastructure and create partnerships that will live beyond the event itself.

The BACEI (2010) report does not break Sausalito out separately from the rest of the Bay Area, but provides some insight as to what ways Sausalito can use this opportunity to engage in change that becomes valuable additions to Sausalito's infrastructure. The economic impacts of America's Cup show the industries to be involved beyond those directly related to the events. The study estimated the economic impacts of the America's Cup on the Bay Area economy and found 10 specific industries that were primarily affected. These include the following: Cup management (medium-term, business housing for the management team for the event), team housing and spending (medium term, business and personal housing for teams), local tourism (stay at home and come to races, no overnight stays needed), nonlocal visitor spending (spend more per person, overnights included), infrastructure (spending on capital projects to support the cup, teams, and tourism influx), media (advertising and other media), super yachts (spending by large vessels that will not participate in the race but need a home), and miscellaneous expenditures (additional tourism-like spending), including extended visits and side trips²⁵.

Appendix I of this report provides additional economic impact data for use in planning for this event in Sausalito; Table 18A in Appendix I shows the overall effects of America's Cup on the Bay Area. America's Cup is a great blend of transient business and pleasure tourism demand coming to Sausalito, and allows a model to be built to track the demand for goods and services by all transient consumers in Sausalito from this point forward.

²⁴ See the joint venture between the Bay Area Council's Economic Institute and Beacon Economics at <http://tinyurl.com/americascupeconimpact>.

²⁵ Ibid, p. 35.

Summary for the Retail Industry and Tourism

The retail sector is appealing as a target of business attraction and retention strategies tax revenue generated. In Sausalito, retail and related services provide tax revenue from both tourists and residents, but also from commuting workers. These three groups of people, and business that buy goods and services from local merchants, are the drivers of retail demand. It is important that Sausalito see retail as reacting to growth of non-retail industries, in terms of demand coming from business and employees, and the growth of tourism in all forms.

Anecdotal evidence exists in terms of tourism flows, and some partial measures exist for Sausalito, but there is no definitive data source to track tourism. Pleasure tourists come from all over the world; business people and employees come to Sausalito for work-related reasons; and consumers use Sausalito as a place to stop on their way to other destinations. All these classes of tourism are potential economic opportunities; the coming of America's Cup to the Bay Area is a microcosm of this idea. America's Cup will blend business and pleasure tourism such that Sausalito's businesses will be affected by a widespread increase in demand. While the next section discusses non-retail industries, the connection to retail and tourism in Sausalito is important to keep in mind as workers and visitors to non-retail businesses generate opportunities in retail and tourism-related businesses.

To use these data to estimate the economic impacts of a new or expanding firm in Sausalito, follow these five steps as an example:

1. Suppose a new health care retail store wanted to occupy an available retail space of 2,000 square feet in downtown Sausalito. Table 8 or Tables 3A, 4A, and 5A of Appendix I provide the summary economic impact data;
2. Suppose this company projected \$500,000 of revenue annually (new to Sausalito);
3. Multiply 0.5 (\$500K/\$1Million) by the numbers in Tables 8 for "Health and personal care" retail or the same numbers in Tables 3A, 4A and 5A of Appendix I;
4. Estimates are approximately new business revenue of \$724,000 (the original \$500K + \$224K for other businesses), employment of 7.5 new workers and new tax revenue of \$42,500 for Sausalito; and
5. A square foot impact of approximately \$362 of new revenue and \$21.25 of new tax revenue.

Multiple companies can be compared and contrasted using these data in planning considerations for economic and community development.

4. Non-Retail Sector: Business Mix and the Marinship

Over 75 percent of businesses in Sausalito are in non-retail industries, which are as diverse as architecture to wood boat repair²⁶. The demand for commercial real estate in Sausalito will be mainly in these industries; there are over 100 vacancies in commercial parcels designated for non-retail use as of January 2011 (STBN, 2011 and City of Sausalito, 2011). The number of vacancies will constantly change, and the exact number is an indicator of opportunities. There are economic opportunities in non-retail that affect retail and related industries as discussed in Section 3 above when non-retail firms are attracted and retained. This happens through their economic impacts on the rest of Sausalito when non-retail firms grow and prosper locally.

Table 11 shows the top twenty types of companies in Sausalito in terms of their business revenues as a proportion of Sausalito overall. Table 11 is important for two reasons. First, it shows the types of companies that currently generate commerce, employment and tax revenues in Sausalito. Second, when matched with vacant commercial real estate, Table 11's data allow a way to build a strategy around attracting and retaining specific types of businesses. This may happen through "industry clusters", for example. These industry clusters could be in legal and accounting services and support internet start-ups that began to locate in the Marinship; there could be a design cluster, where environmental design, architecture, engineering, and other design consultants began to locate close to each other, or co-locate, and utilize vacant commercial space. This is much like the retail concept of anchor tenants drawing demand for other tenants in adjacent commercial spaces to form a hub of activity in a specific sector.

For those engaged in business attraction and retention for Sausalito, this table shows the major non-retail industries and their relative importance in terms of estimated business revenue to the city of Sausalito. What Table 11 reflects is that non-retail industries are of major economic importance to the city of Sausalito. Appendix I, as discussed in detail below, provides data to estimate the effects of attracting and retain businesses in non-retail sectors on Sausalito overall. For example, if a new legal firm enters a vacant office space and generates \$1 million of revenue, it creates another \$499,000 in business revenue indirectly and in an induced way throughout Sausalito using Table 20A in Appendix I.

²⁶ Although technically part of the non-retail sector, local, state and federal government are not discussed in this section. While local government will be a direct partner of any community and economic development strategies in Sausalito, its economic impact in terms of business attraction and retention is not in the same context at the private sector.

Further, using Table 4A in Appendix I, legal services growth of \$1 million in demand generates 11.3 jobs; by Table 5A in Appendix I, it also generates over \$50,000 in additional tax revenue for Sausalito. This section expands on the theme that vacant commercial real estate matched with these data provides a planning tool for the city.

Table 11: Twenty Industries in Sausalito by Business Revenue, Percent of Totals

Industry or Industry Group	Employment	Business Revenue
Real estate establishments	12.3%	12.5%
Other support services	4.9%	9.2%
Imputed rental activity for owner-occupied dwellings	0.1%	6.6%

Short-Term Business Needs Study and Non-Retail

Earlier in this document, we referred to the STBN Study prepared by the Business Advisory Committee (BAC) for both city staff and the business community (STBN, 2011). This study not only looked at the retail assets of the city, but also how office, industrial and other units were demanded as of January 2011. An inventory of commercial vacancies provides a sense of the excess capacity and

room for expansion within Sausalito, especially for retail in downtown Sausalito²⁷. In addition to providing information for the study of business mix, the STBN Study assessed vacancies in office/design and industrial; the report notes an increase in advertising, packaging, product development, and "creative" businesses. Also, financial services and more traditional business users in Class A and B space are decreasing. The overall Class A and B office space has a vacancy rate of approximately 10.9 percent, where Marin overall in March 2011 had a vacancy rate of 19.9 percent²⁸. These data suggest Sausalito as a better business address with respect to Marin County overall; its proximity to San Francisco may help explain this. Class A and B space can be simply described in many ways, where the below definitions are examples:

- Class A Buildings: These buildings sport modern construction with state-of-the-art functionality and architectural design, infrastructure, life safety and mechanical systems. Class A buildings are also located in the most sought-after areas. Not surprisingly, Class A buildings typically command the highest rents, include the best amenities and, consequently, offer the least attractive concession packages for tenants.
- Class B Buildings: These buildings are usually highly functional, well-located facilities more than 10 years old. Class B buildings generally feature a less desirable design and infrastructure than Class A buildings, although a well-located B building can be renovated and reclassified as Class A²⁹.

According to the STBN Study, traditional users of Class A office space such as financial services and more traditional businesses are decreasing; the types of firms that can occupy office space are extremely varied. During a recession, firms and industries tend to leave an area's commercial space quickly and in groups, especially if that group is affected at a global level as an industry. The Marinship, based on the excess capacity in office space, commercial space seems to be the best place to populate firms (firms designing green technology, internet software, movie production, advertising, etc. would be a good fit).

²⁷ The STBN Study did not take into consideration marine vessels that act like commercial space and derive revenue for land-based businesses that use capital floating on the water. The boat slips themselves could be seen the same as empty office space, see Appendix I's Table 29A for the economic effects on Sausalito for \$1 million of additional boat slip rental taking place.

²⁸ A commercial site, Loopnet (www.loopnet.com), provided additional data on office/design space in the STBN Study. The Marin County data overall is from Cassidy Turley BT Commercial Research (see www.ctbt.com).

²⁹ See <http://tinyurl.com/classAB>.

The square feet of space available are not as important as the type of space available, which will determine the type of non-retail business that occupies the space. Once the type of non-retail business to occupy a currently vacant space is determined, an algorithm that shows the economic benefits per square foot can be determined. Because many industries represented in Table 11 are professional services industries, we will now focus on these firms. The economic benefits of these firms generate benefits for other companies in Sausalito.

The Marinship as Sausalito's Place to do Business

For Sausalito, its location on the waterfront has been a magnet for artists, residents, marine and other businesses, and tourists alike. There are diverse businesses located in the Marinship, including light industrial, restaurants, professional services, grocery and other retail, and personal services. Proximity to US 101 also makes this area attractive for businesses that would naturally feed off of a worker base that primarily commutes. The marina areas and industries in Sausalito encompass industrial, marine support, and recreational marine businesses. The floating homes at the northern edge of the city provide both residential and additional tourist flows on the waterfront.

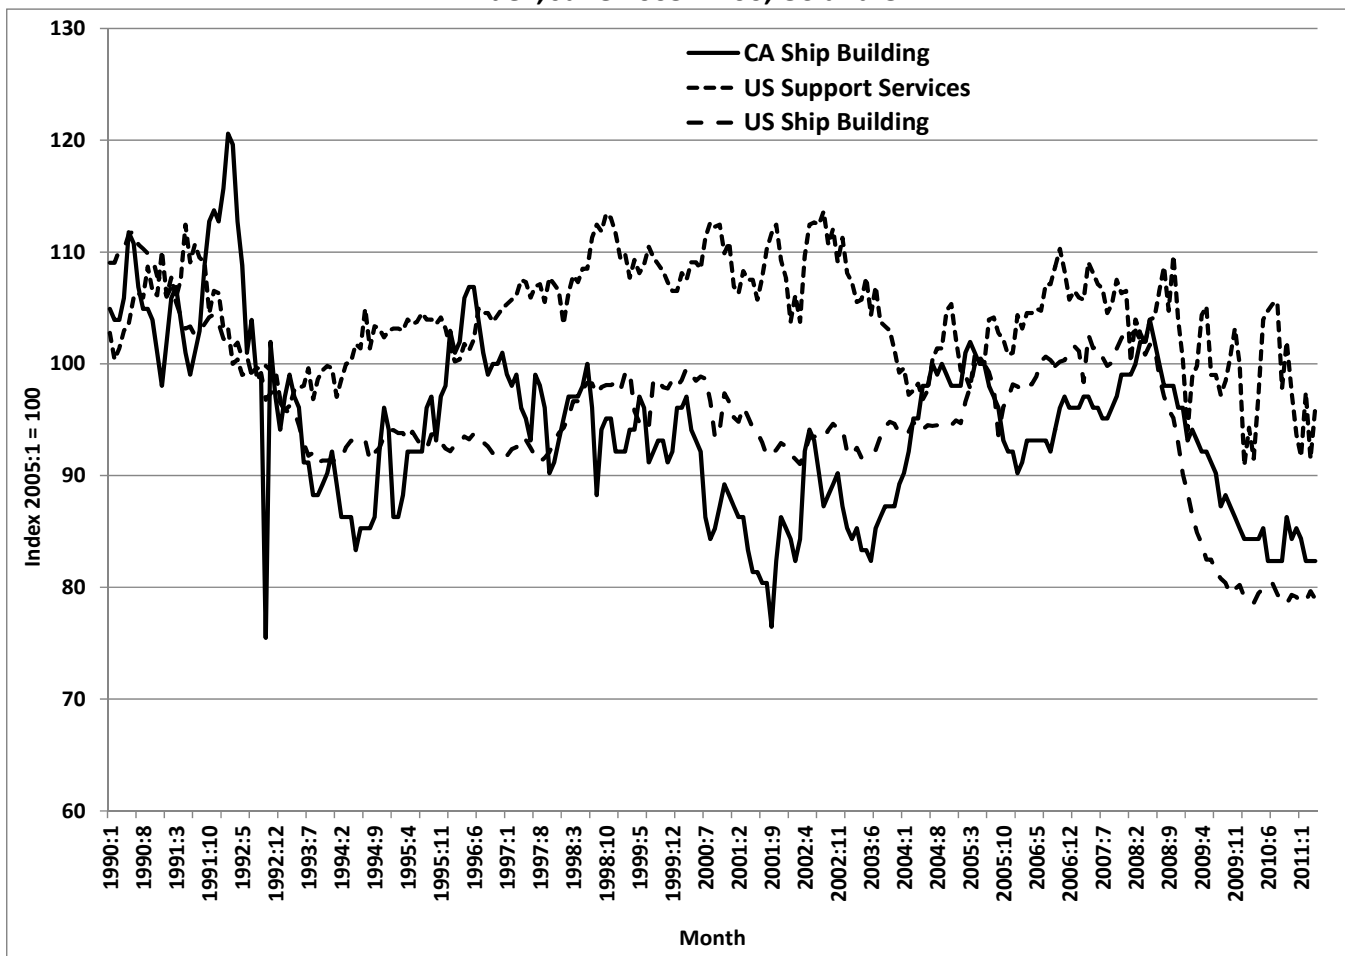

The occupied and vacant real estate in the Marinship also provides a way to examine data and planning to reduce vacancies, increase long-term occupancy and generate multiplier effects throughout Sausalito. A recent study by the City of Sausalito on the Marinship's Land Use (see City of Sausalito, 2011) is a comprehensive look at the Marinship, its real estate, and the harbor as productive capital; this report complements the STBN Study³⁰. The Marinship boundaries were defined as Sausalito's Richardson's Bay waterfront, between Bridgeway for street addresses 1750 - 4000, 300 Napa Street (Galilee Marina) to the south, and Gate 5 Road on the northern boundary (city limits). The bulk of these non-retail businesses are located in the Marinship because infrastructure and location work there versus other parts of Sausalito; the Marinship has the best non-retail opportunities to expand Sausalito's economy. We first review the waterfront area's main industry, the marine industry, and its relationship to other companies.

The Marine Industry and the Waterfront

³⁰ See Footnote 4 for the Marinship's geographic boundaries.

Figures 9 and 10 provide two ways to viewing the marine industry’s recent history in a more global way. The Bureau of Economic Analysis (BEA) tracks the production and incomes for ship and boat maintenance and marine support services, two industries that are at the heart of the Marinship’s history, and many current businesses along the waterfront. The Bureau of Labor Statistics (BLS) and the Employment Development Department of California (EDD) track employment in the same industries for both the nation and California specifically. These figures show that ship/boat building, repair and maintenance are in decline both in production levels and in terms of overall employment at the national level. Further, the employment in marine service in California shows a trend falling slightly faster than the United States overall. If the marine business is to be reinvigorated or protected from decline, these simple data suggest the economic incentives to do so are shrinking quickly.

Figure 9: Employment in Ship/Boat and Marine Support Services, 1990 – April 2011
Index, June 2005 = 100, US and CA

Sources: Bureau of Labor Statistics (BLS) and Employment Development Department (EDD)

A recent report by Datamonitor (2011) provides a global view of the marine services industry. Datamonitor (2011) forecasts reduced growth in marine services and port revenue through 2015, positive growth in marine services demand overall. However, entry into these markets on a small scale is likely to be unsuccessful according to this report; increasing operational costs, large barriers to entry and an uncertain economic situation augment the uncertainty in these markets³¹.

Figure 10: Ship and Boat Building/Repair, Production Levels, United States, Index, 2005 = 100

Sources: Bureau of Economic Analysis (BEA)

For Sausalito to successfully retain its marine industry, a focus on niche markets may be needed. High barriers to entry mean it is unlikely that Sausalito will experience new marine-based firms in terms of traditional services. Marine design, which would be part of the specialty design cluster of firms discussed above, may be a niche given Sausalito's location and its available office space. A recent report

³¹ Datamonitor (2011), page 17

suggests that the Bay Area is becoming a hub for environmental design in many areas, and that “green” jobs in producing or design goods that enhance sustainability are likely to grow through 2020³².

The economic impact of \$1 million in boat repair or servicing revenue is below in terms of the jobs it creates and the revenue in other businesses throughout Sausalito it provides³³. The America's Cup event is likely to have a large impact on the Marinship, given the connection of America’s Cup to the marina areas. Commercial real estate available for leases may be used by the Cup teams as they come to the Bay Area. If there is one short-term activity that Sausalito can prepare and plan for concerning the waterfront, it would be America’s Cup³⁴.

**Table 12: Ship/Boat Repair Service, Economic Impact on Sausalito
\$1 million of new revenue**

Ship/Boat Repair and Service	\$1,000,000
Other engine equipment manufacturing	44,800
Wholesale trade businesses	36,100
Management of companies and enterprises	34,600
Imputed rental activity for owner-occupied dwellings	30,000
Real estate establishments	17,600
Bars and Restaurants	16,900
Advertising and related services	16,600
State & local gov’t, non-education	15,900
Investment banking	12,200
All other miscellaneous professional, scientific, and technical services	11,400
All Others	171,500
Total	\$1,407,600

Source: IMPLAN® and BEA

According to City of Sausalito (2011), there is less than 10 percent total vacancy, including office space, in the Marinship. This vacancy rate is below the average in Marin County; office space is estimated to be the highest vacancy rate within Sausalito. There is also commercial space in terms of

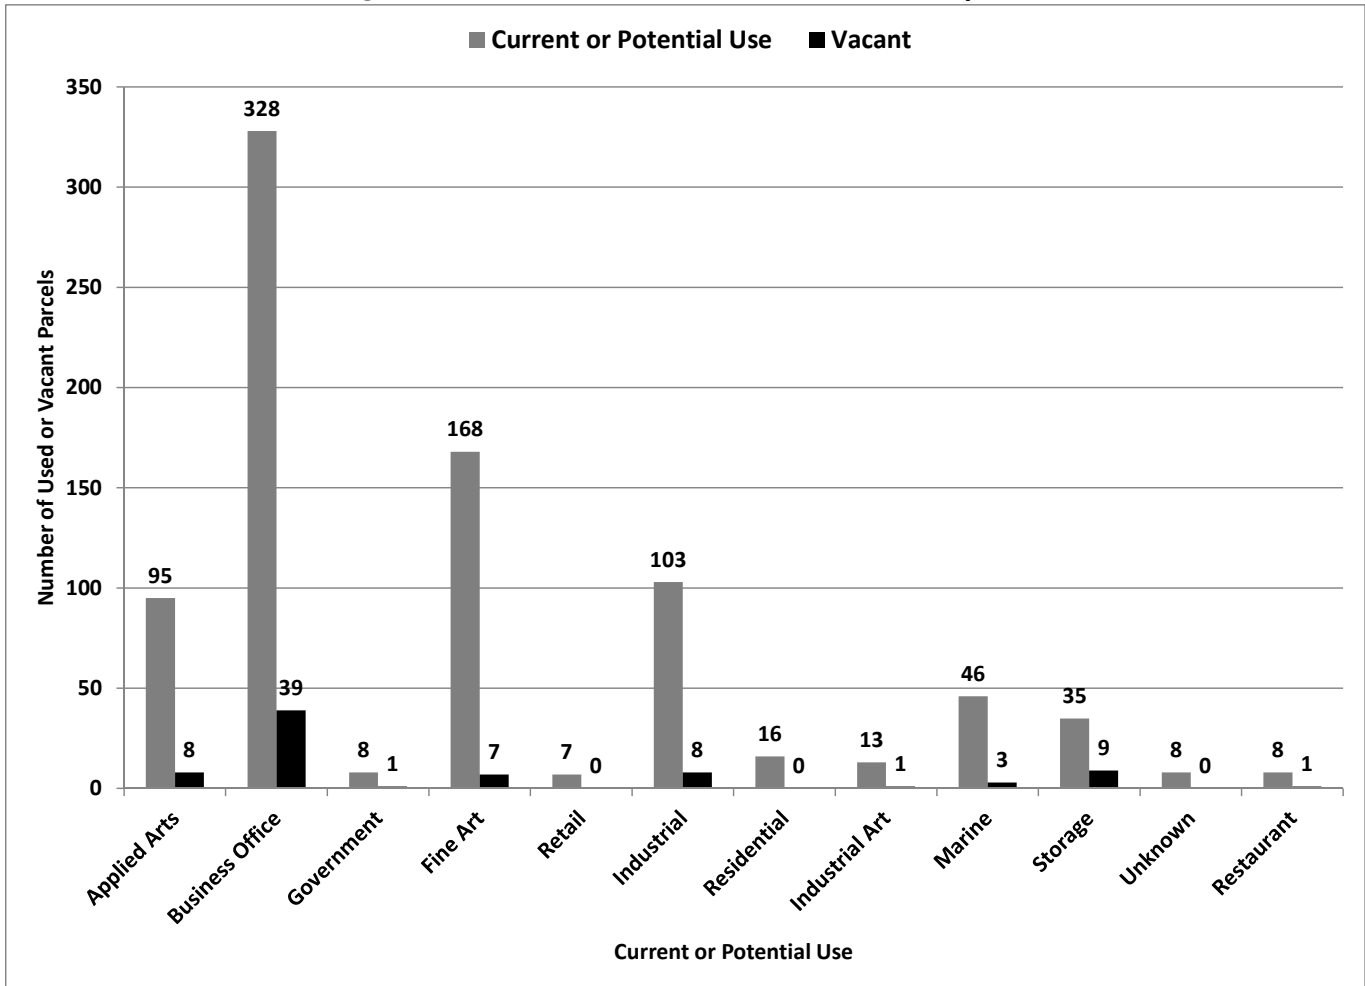

³² See Next 10’s [Many Shades of Green](#) (2009). This report mentions that there is growth in energy generation using the Bay Area’s waterfront, but does not mention environmental design specifically in marine industries. However, Next 10 (2009) does suggest growth in environmental design, where green marine design would be a potential fit for Sausalito. See analysis on environmental design firms entering Sausalito in Table 14.

³³ Interviews with a mix of marine-based firms on the waterfront suggested that environmental mitigation, the cost of dredging, and the low growth (and negative growth) of potential demand long-term, provided few economic incentives to expand the number of slips without a partnership with the City or to start a new company in marine services. This corroborates Datamonitor (2011) in terms of new entrants and their attraction to marine industries.

³⁴ See brief discussion on this in Section 3 of this report and in Appendix I, Table 19A, for the economic impact of changes to come to the Bay Area, based on BAECI (2010) estimates.

the empty boat slips and other physical capital available. Figure 11 shows that the amount of marine use commercial space and its vacancy is low.

Figure 11: Industrial Use vs. Vacancies, Marinship, 2011

Source: City of Sausalito (2011) and STBN (2011)

The key to Figure 11 is to recognize the amount of business office parcels that exists in the Marinship versus marine, retail, and restaurants. The Marinship provides a wide diversity of businesses and business opportunities for the City of Sausalito. Before the economic benefits of a new tenant can be determined, the type of business the new tenant does must be determined; the estimated benefits derived from that tenant can then be divided by the space size to find a per square foot metric.

The Marinship Business Mix: The Possibilities

The Marinship can be seen in three ways: (1) the waterfront itself, including the docks, boat slips, underwater railways for marine use, and businesses that use the water as their legal marketplace; (2) the industrial waterfront, which may or may not be attached to the marine industry, including light manufacturing, marine, some retail, and other firms; (3) there are the creative industries and a mix of professional, retail and personal services. It is important to use Figure 11 as a way to understand the flow of business in and out of the Marinship, and in some ways in and out of Sausalito overall. Business offices by identified use represent 39.3 percent of the total commercial space in the Marinship. This provides a large amount of flexibility in the types of businesses that Sausalito may target for any vacancies. From the mix in Figure 11, we will look at relatively large vacancy categories and show the economic impacts of attracting firms that would generate at least \$1 million in new revenue each. The reader can use Table 14 below as algorithms for changing demand in Sausalito for existing commercial space; if a firm comes in that generates \$5 million in annual revenue, multiply the appropriate tables below by 5.

Table 13: Estimated Economic Impact of Marinship Economic Mix, 2010

Description	Employment	Business Rev	Employment	Business Rev
Professional services	273.6	\$223,501,000	9%	35%
Specialized design services	157.4	\$27,405,000	5%	4%
Banks, Credit Unions	93.5	\$26,173,000	3%	4%
Wholesale Trade and Commercial	95.4	\$22,687,000	3%	4%

Totals in Marinship	3,005.4	\$631,468,000	100%	100%

Source: IMPLAN, EDD and BEA (2011)

Tables 13 and 14 provide an estimation of economic impacts from Sausalito’s industrial mix of the Marinship. These data show the important industries and combined with Tables 11 and 12 can be used to target specific commercial space vacancy within Sausalito. The Marinship is the most important business area in Sausalito for two reasons. First, the Marinship has a large amount of diversity in terms of current use of commercial space and potential use based on the transition of firms in and out of

Sausalito. Second, the Marinship involves the waterfront as a business asset, not only in terms of business locations, but businesses based on marine industries.

Non-Retail Sector: Economic Impacts

The economics of occupied or vacant real estate depend on current or potential occupants and their business connections to other companies in Sausalito. The economic impact analyses and commercial vacancy data can act as a guide for planning; as one type of firm or industry builds up a presence or cluster in an area, it implies the stimulus of business activity for other industries. What Figure 11 shows is that “business office”, “applied arts” and “fine arts” are currently most vacant. Vacancies will shift, as will the available uses in the vacant spaces.

The analyses below compare and contrast the economic impacts from focusing on one industry versus the other. Office space is the most underutilized capital in the Marinship. The filling of these offices may form industry clusters. What these data provides is a way to understand how local businesses and government can gain from specific industry expansions. Due to the relative size of the non-retail sector in Sausalito, it is good to look at how changes in non-retail industries affect other industries throughout the city. This section provides a breakdown of major industries by employment, and business revenue and then simple multiplier ideas. The data below represent several industries that could fill vacant space or may be targeted to augment the number of businesses operating in Sausalito:

- Applied Arts (Environmental Design, Architecture, etc.);
- Computer software and internet design and businesses;
- Business Offices (Legal, Accounting, medical, miscellaneous services);
- Fine Arts³⁵ (artists, musicians, motion picture and sound/music production);
- Light Manufacturing (ceramics, sails, consumer products);
- Marine (Ship/Boat repair, services, storage); and
- Boat Slip Rentals (specific type of commercial rental).

What the analysis of this section will do is look at different ways of filling the current, underutilized space which serves both a current purpose in terms of potential economic development, but also looks forward to how the Marinship could evolve and generate different scenarios for both

³⁵ “Fine arts” as defined for this section is a mix of artists and professional services, including some digital design for motion pictures.

property owners and the city overall. The summary provides an overview of these effects and recommends the pursuit of specific industries based on their effects on Sausalito's economy.

**Table 14: Summary Economic Impacts, Non-Retail Sector, Sausalito, 2010
From \$1 million of new business revenue for these Selected Industries**

Industry	Employment	Business Revenue	Taxes
Legal Offices	9.2	\$1,500,000	\$50,500
Marine Services (Ship/ Boat repair and service)	5.2	\$1,408,000	\$30,300
Light Manufacturing	7.4	\$1,418,000	\$29,700
Fine Arts (Artists)	18.9	\$1,487,000	\$31,000
Sound Recording	17.5	\$1,900,000	\$29,000
Environmental Design (Green Design)	11.4	\$1,532,000	\$29,700
Computer Programming and Design	9.2	\$1,478,000	\$32,000
Applied Arts: Design/Architecture	9.9	\$1,563,000	\$30,800
Boat Slips	13.1	\$1,523,000	\$86,000
Accounting Offices	10.3	\$1,496,000	\$31,200
Medical and Dental Offices	8.9	\$1,459,000	\$29,124

Sources: IMPLAN® and BEA

Using These Data for Planning

Table 14 provides a summary of the economic impacts from different types of non-retail industries entering Sausalito. For the non-retail sectors discussed above, the direct effect is \$1 million of additional revenue for that industry, and the overall effect on Sausalito is due to indirect and induced revenues, jobs and taxes generated. Tables 20A and 31A provides data similar to other sections of this report to estimate the effects on other industries throughout Sausalito concerning business revenue; tables 3A through 5A provide summary information for each of the industries in Table 14.

For example, if an environmental design firm were to locate in a currently available Class A office space, that \$1 million of revenue would generate 9.9 new, full-time equivalent jobs in Sausalito overall; this new business is estimated to also generate almost \$1.532 million in new business revenues for city business (including the original \$1 million in revenues for the design firm and approximately \$532,000 in indirect and induced revenues for businesses beyond environmental design) and approximately \$29,700 in new state and local tax revenues annually³⁶. This logic holds for any of the

³⁶ It is difficult to generate a number for just the local tax revenue due to state tax revenue coming back to cities through various means (sales tax revenue redistributes to cities, towns and counties, for example). Thus the state and local estimates provide the potential, local tax revenues that may be state or locally based.

industries in Table 14; some further details on the effects of a new environmental design firm are available in Table 26A in Appendix I. If this firm occupies 3,000 square feet of space, this new firm would generate approximately \$510.67 of new business revenue for Sausalito and \$10 of new state and local tax revenue per square foot of space occupied. Other businesses and their economic benefits to Sausalito can be compared in a similar way.

These industries were selected as examples because they have the largest sum of indirect and induced effects from generating \$1 million in business revenue on the business revenues of other companies throughout Sausalito. Tables 3A through 5A in Appendix I provide company-level effects for many different types of companies.

Summary for Non-Retail

The non-retail industry data can be used in three ways for business attraction and retention activities for Sausalito. First, vacant commercial real estate provides space for potential commerce for the city, including new workers and tax revenue. Second, the economic impact data of Table 14 and Appendix I's tables, tells us the types of firms most likely to grow as a result of attracting and retaining specific types of firms. Third, there are additional employment and tax revenue implications in the economic impacts; retail and income leakage are incorporated into the impact data. In sum, when new firms enter vacant real estate, Sausalito can market the new company's entry other, affected firms to be affected, including retail and related industries, to support their needs and also reduce retail and business revenue leakages as much as possible.

These data also work in reverse. If firms leave Sausalito, not only does commercial space become vacant, but there is also a reduction in demand for goods and other services otherwise that follow the logic in Appendix I's tables. If grocery stores sales rise when a vacant boat slip is rented, those sales are lost when that slip remains vacant. Local interviews and a survey instrument used to collect qualitative data as part of this study provide insights from residents and businesses about the types of businesses they would like to see attracted and retained.

To use these data to estimate the economic impacts of a new or expanding firm in Sausalito, follow these five steps:

1. Suppose a new environmental design firm wanted to occupy an available office space of 3,000 square feet in the Marinship. Table 14 or Tables 3A, 4A, and 5A of Appendix I provide the summary economic impact data;

2. Suppose this company projected \$2,000,000 of revenue annually (new to Sausalito);
3. Multiply 2 (\$2 million/\$1Million) by the numbers in Tables 14 for “Environmental Design” or the same numbers in Tables 3A, 4A and 5A of Appendix I;
4. Estimates are approximately new business revenue of \$3.064 million (the original \$2 million + \$1.064 million for other businesses), employment of 22.8 new workers and new tax revenue of \$59,400 for Sausalito overall; and
5. A square foot impact of approximately \$1,021.33 of new revenue and \$19.8 of new tax revenue.

Multiple companies can be compared and contrasted using these data in planning considerations for economic and community development.

5. Local Interviews, Survey Results and Qualitative Data

Given all the quantitative data that Sausalito can use in Appendix I and the body of this report, this section summarizes survey data collected through an online survey instrument. Our team also spoke with many individuals and some groups as either specific appointments or in open sessions held by Marin Economic Forum. Those that came forward were primarily business people; some residents, city staff and elected officials also attended our open forums or requested individual meetings. Appendix II provides summary data, the questions, and the qualitative answers provided by those who had opinions about Sausalito's future, and a lot of information to consider. The authors of this study worked with the Business Advisory Committee (BAC), which includes local residents, business people and city staff and elected officials, on the survey questions asked. A postcard was sent to every postal address in Sausalito from Marin Economic Forum with the survey's website link, in an effort to survey Sausalito's business and resident population. The City of Sausalito and the Sausalito Chamber of Commerce also used the press and social media to market the survey. Of 5,536 postcards mailed, we received 461 responses (a response rate of 8.32 percent). The survey was confidential and anonymous ex ante; all respondents had the option to provide their name and mailing address at their discretion to signal a desire to participate in future discussions of Sausalito's business and community future³⁷. In this section, we summarize themes that emerged from the survey and individual/group meetings. There is a wide breadth of opinions shown in the survey results that await Sausalito as it engages in planning for future community and economic development activities. Please consult Appendix II for more details.

Themes from the Survey Instrument

The survey's first question asked if the respondent was a resident, business owner, or both. Of the 461 responses, 278 identified themselves as residents, 61 identified themselves as business owners, and 122 identified themselves as both. Of the respondents, approximately 32 percent had lived or done business in Sausalito for over 20 years. 394 respondents said they shopped or dined in Sausalito at least once a week; 22 percent of respondents said that they rarely (less frequently than monthly) shop or dine in the downtown area of Sausalito. When shopping in Sausalito, grocery and personal services were the main sectors of focus. This question also allowed respondents to provide specific

³⁷ Of the 461 respondents, 134 provided their name and other contact information.

answers; respondents suggested they used a diverse range of businesses, including marine services, hardware stores, and fitness-related services, as well as categories specifically provided in Question 5.

Question 6 asked what services or businesses are not in Sausalito that the city is currently lacking. Only 304 respondents provided an answer, of those, 136 respondents (44.7 percent) said a “grocery store”. The next question asked about non-retail businesses and if the city would benefit from non-retail business growth: 170 respondents said “yes” and 180 said “maybe”. After this question, the respondents were asked to provide any reasoning based on how they answered the previous question. Respondents appear to be optimistic but cautious about non-retail growth. The respondent's answers were diverse in the type of businesses they would like to see in Sausalito.

Question 9 asked about the perceived effects of a potential increase in tourists to Sausalito and the impact of that increase on the city (positive or negative). This question asked for one of five answers, ranging from very negative to very positive. The answers were somewhat evenly distributed for residents and resident/business owners. Business owners that were not residents were more positive about the possibilities of more tourism in Sausalito. Question 10 asked the respondent to expand on their opinion given in Question 9. Overcrowding the city emerged as a negative theme where increased city revenue emerged as a positive theme. 349 respondents provided more elaboration on Question 9 as answers to Question 10 of the 436 that actually answered Question 9.

Of the business owners, most were in retail and professional services, where 88 of the 179 business owners (who may have been residents or non-residents) were in businesses outside of real estate, restaurants, retail, grocery, personal services, or professional services. This question, Question 13, also allowed for specific responses, which were varied as to the types of businesses owned or represented by the respondents. Question 15 asked about the use of local services by business owners; 141 gave specific, open-ended responses that are listed in Appendix II. Business owners generally used banking, food, copy and mailing services, as well as other retail. Question 16 asked about the business perspective on increased tourism, similar to how residents were asked in Question 9; only those that identified themselves as business owners or representing businesses were able to answer this as to provide a comparison to residents. Businesses verified their moderately-positive outlook on increased tourism from Question 9. Question 17 asked a similar query to Question 10 for an expanded opinion to the answer for Question 16. In general, business owners and representatives suggested that their business do not directly serve tourists, so the impact would be minimal from a business standpoint.

Question 18 asked about concerns local businesses have about doing business in Sausalito. Concerns and challenges in dealing with the City became a theme in these answers.

Over half of the respondents that identified themselves as business owners said they had been in Sausalito as a business for over 10 years, and over 72 percent have been in Sausalito for over 5 years. Question 20 asked the annual revenue of the business; over 25 percent declined to state that number. Of those that did state the number, over 75 percent make at least \$100,000 per year; over 12 percent make over \$1 million. Question 21 asked business owners what can be done to enhance the business community in Sausalito. The respondent's answers were detailed, diverse, and passionate. Generally, the responses discussed the idea of creating a Sausalito that is both welcoming and enjoyable for residents to live, work, and in which to do business.

Question 22 asked the respondent's age. Over 79 percent were over the age of 45, and over 23 percent were over 65. The next question asked about household income and there was a relatively even distribution over the selected ranges; 399 respondents answered this question. Question 24 asked if the respondent owned or rented a home. Of the residents that answered this question, 64 percent own their homes. Question 25 asked for the respondent's contact info if they cared to give it as part of a follow-up for this survey; and the final question asked for any further thoughts, of which 108 respondents gave final statements.

These data should be seen as a perspective on Sausalito, and simply additional information from which to form strategies about Sausalito's business community and how that involves the city's residents and businesses, who should be also seen as residents regardless of a business entity's ability to vote. This is why the survey asked for respondents that were both residents and business owners. Readers are invited to peruse Appendix II, as the open-ended answers have been kept in their raw, unedited form.

Themes from Individual or Group Meetings

Opinions and discussions in these meetings ranged from economic to cultural to political, from historic to residential to business preservation. Many perceptions about business in Sausalito were posited, many with regard to the Marinship specifically. Three major themes about business in Sausalito emerged from the interviews:

- As a city, preservationist politics have curbed good business opportunities that can help Sausalito enhance the Marinship area to provide and sustain a diverse mix of businesses in that area;
- Tourism, while filling the city coffers with sales tax revenue annually, should remain in the southern portion of Sausalito, the “downtown” area, and the business mix in the northern portions should not cater to a transient, tourist crowd; and
- There needs to be better integration between the businesses and city government concerning simple issues such as parking for business owners and residents, permits for use and tenant improvements, as local residents do not patronize the downtown businesses due to a mix of transient tourism and lack of available parking.

Those that were residents and not business owners discussed the preservation of a small-town, coastal community feel in Sausalito; local merchants, some of whom were also residents, suggested that patronage of their firm was more a function of their own advertising and outreach than an inability of residents to park or to be turned off by tourism. In fact, many suggested that Sausalito also has three times that define its residential and economic flows daily:

- 6am – 9am is residential and commute flows;
- 9am – 6pm is local workers, tourism, and return commute; and
- 6pm to 10pm is residential mainly.

In our interviews, individual and groups spoke passionately about living and doing business in Sausalito. The Marinship stirs both cultural and political passion for the city, and will likely remain a highly-disputed part of the city’s economy. The preservation of Sausalito's history as a waterfront community, based on marine industries, came up as a theme from residents; business owners did not disagree with those ideas, but wanted it done in a business-friendly manner.

It is important to recognize that the city, Chamber of Commerce, merchants, landowners, and residents must all find a common vision for Sausalito. There are opportunities, such as the America’s Cup, on the horizon, and Sausalito needs to be prepared. The interviews suggest that Sausalito is some distance away from that happening.

6. Conclusions and Action Plan

This report provides the City of Sausalito, its policy makers, and those interested in community and economic development with economic data concerning the demand for Sausalito's businesses and Sausalito's economic evolution. Economic activity in Sausalito generates over \$1.2 billion annually in terms of business revenue for Sausalito companies. Over 77 percent of companies in Sausalito are not retail or tourism-driven companies. Professional services, such as architecture, engineering, legal, accounting, specialty design, and other consulting, generate over \$388 million per year in business revenue, and employ over 1,290 workers. Retail and related services generate over \$82 million in revenues for companies, while employing over 1,100 workers.

As of June 2011, approximately 5,600 people were employed within the city. Sausalito businesses bring in approximately 5,000 people daily as employees that do not live in Sausalito. Sausalito's median age is 51.1 years, while Marin County has a median age of 44.5. Sausalito rents 49.2 percent of its housing stock. Sausalito's businesses, especially retail and related industries, serve both residents and tourists. The retail mix in Sausalito includes miscellaneous retail stores, clothing and jewelry stores, and grocery/convenience stores. Sausalito's proximity to retail centers in Marin County and San Francisco provide retail breadth beyond merchants inside Sausalito; a recent commercial real estate inventory suggests retail parcels are available in Sausalito, approximately a 7.5 percent vacancy rate as of January 2011. This report's data, including the data in Appendix I, provide a way to track the economic connects and effects of new and expanding businesses on Sausalito's other businesses and city government in terms of new business incomes, new employment and new tax revenue.

Empty boat slips, restaurant tables, and hotel rooms, have similar effects as vacant office, industrial, retail, and other commercial space have on a local economy. Any leakage in retail implies lost tax revenue for the city. Non-retail businesses, as they grow, generate business for retail and related services because of the employees and additional, business tourism that comes to Sausalito. Sausalito, because of tourism's presence, generates sales and transient occupancy taxes from tourists. Over 3,000 workers are estimated as working in Marinship-based businesses. In 2010, Sausalito collected \$1.23 million in sales tax revenues. Sausalito is a little over 11 percent of Marin County's transient occupancy tax collections, collecting over \$780,000 in TOT revenue in fiscal year 2009-10. The coming of America's Cup to the Bay Area provides Sausalito an opportunity to generate economic benefits for both non-retail and retail businesses in support of the event.

Advertising, professional and technical services, sound recording businesses, investment banking, and specialty design firms are currently industries in the non-retail sector within Sausalito. Two recent surveys of commercial space suggest the Marinship has mostly business office vacancies. Utilizing vacant commercial space and niche businesses in marine, such as environmental design, mechanical design, and research firms, may provide synergies between available square footage and Sausalito supporting the marine industry through more commerce. Economic impact data coupled with vacant commercial real estate inventories can help guide a planning process that compares target firms to be attracted or retained and complementary firms that may be needed to support those targeted businesses.

Qualitative data was also generated for this report in two ways. Open forums provided time for residents and business owners to come and talk about the city economy, residential and business issues, and Sausalito's future. A confidential survey was made available, and every mailing address in Sausalito was sent a postcard to provide the survey's website and timeline for response. There were 461 responses received, an 8.3 percent response rate. Residents suggest that business growth creates increased traffic, but also obvious financial benefits for the city and for local businesses. Many of the survey respondents were long-time residents of Sausalito; over 72 percent of business had been operating for more than five years. For residents, over 79 percent of respondents said they were over 45 years of age. Business owners and residents, both those that were interviewed or that came to group sessions, gave strong opinions about parking issues for themselves and customers; interactions with local government are more time-consuming than necessary and; car and bike traffic that was becoming more dangerous; and a need for more focus on business issues and support for local businesses. No one type of retail or non-retail firm stood out as a "must have" by those interviewed; many are concerned about how to both generate a health business environment and preserve the historical aspects of Sausalito's waterfront.

To use the economic impact data to estimate the economic impacts of a new or expanding firm in Sausalito, follow these five steps:

1. Identify the type of firm in Tables 3A, 4A, and 5A of Appendix I;
2. Estimate the annual, new revenue for Sausalito from the new or expanding company;
3. Divide that new revenue by \$1 million and multiply by the numbers in Tables 3A, 4A and 5A for the new or expanding firm's industry;

4. These are estimates of new business revenue, employment and tax revenue generated by the company in question; and
5. Take the square feet of newly occupied space and divide into the impacts to get a square foot metric for decision making.

Multiple companies can be compared and contrasted using these data in planning considerations for economic and community development.

Action Plan:

Commercial vacancy and economic impact data can be used in support of the following set of goals, tasks and actions. An overt partnership (the Partnership) including the Sausalito Chamber of Commerce, the City of Sausalito, and interested residents should be built to advertise and facilitate the tasks below.

Goals, Tasks and Actions on an annual cycle:

- **Discuss and decide what incentives the City, landlords, and other businesses can provide new firms to be courted, if any, as part of annual budget cycle for City of Sausalito;**
- **Enlist local, commercial real estate brokers and agents to provide quarterly data on commercial real estate to City of Sausalito Finance and Public Works Departments for planning purposes;**
- **The City of Sausalito integrates commercial real estate data and economic impact estimates into the preparation of the City's budget and capital improvement planning for city infrastructure;**
- **Include how industries in Sausalito would be affected by infrastructure improvements, in terms of both new revenues and additional costs, in planning reports; and**
- **The Partnership should inform residents, business owners and city elected officials and staff about these new and expanding companies in Sausalito, those that leave, why they left, and, their economic impacts on the city.**

On-going goals, tasks and actions:

- **Focus on niche, non-retail businesses and advertise Sausalito as a home for these firms:**
 - **Internet software, mobile device software, and other specialty software design;**

- Environmental design, architecture and other applied arts based on what exists in Sausalito already;
- Sound recording and other fine arts should be supported due to their relatively large economic impacts; and
- Marine industries that complement other industries in the Marinship and throughout Sausalito (design and education).
- Retail and related industries (restaurants, bars, hotels, tourism activities) should actively market to new firms that come into vacant, commercial real estate to generate new demand for their goods and services; and
- Develop metrics for monitoring change, such as: number of square feet vacant in different use categories and different parts of Sausalito (downtown, Caledonia, Marinship); growth of transient occupancy tax (TOT) and restaurant-specific sales tax revenues; growth of home-based businesses; and tracking ferry riders coming to Sausalito for tourism versus work.
