

MEMORANDUM

DATE: April 25, 2011

TO: Housing Element Task Force

FROM: Lilly Schinsing, Associate Planner 

SUBJECT: Task Force Subcommittee Work on Revisions to Vacant and Underdeveloped Draft Technical Study

Discussion

At the March 28, 2011 Housing Element Task Force meeting the Task Force formed a subcommittee of Vice-Chair Cox and Task Force Member Withy to work with Staff to make the following revisions to the Vacant and Underdeveloped Draft Technical Study:

- 1- Review the data to eliminate condominiums in the underdeveloped inventory.
- 2- Review the State Housing Element law to determine if constrained parcels such as those which are underwater, landlocked and/or historically significant should be/are required to be included in the sites inventory.

The following is a summary of the progress that has been made on this topic:

March 29:

- Staff contacted the State Department of Housing and Community Development (HCD) and had a phone conversation with Sausalito's HCD contact, Melinda Benson. Mrs. Benson indicated that Sausalito can make the case that the three types of constrained parcels the Task Force identified (underwater, landlocked, historically significant) are not suitable or appropriate for the development of housing within the planning period and therefore could be eliminated from the inventory.
- Staff discussed the State's response with the City Attorney. The City Attorney will review the Housing Element Law and inform the Task Force of her findings at the April 25 Task Force meeting (via either memo or oral report from Staff).

March 30:

- Staff reviewed the collected data and revised the inventory to eliminate the condominiums from the underdeveloped inventory.

March 31:

- The Task Force subcommittee with Staff to discuss the revisions and the State's response. The Task Force directed Staff to eliminate underwater parcels from the inventory but retain the landlocked and potentially historically significant properties. The Task Force also directed Staff to conduct a revised site constraints analysis with 10 new random parcels for each parcel category. Staff subsequently made the revisions as directed by the subcommittee.

Item 5a
(55 pages)

BLANK

April 8:

- The Task Force subcommittee met with Staff to discuss the revised Vacant and Underdeveloped Draft Technical Study. Errors in the document were corrected by the Task Force subcommittee. The Subcommittee indicated that since the Task Force's direction was to receive concurrence from both HCD and the City Attorney regarding the elimination/retention of constrained parcels, the subcommittee would be unable to approve the revised draft Technical Study. Staff indicated that the revised numbers from the study would be included in the "menu" of options to be presented at the April 25 Task Force meeting, and that these numbers would be subject to concurrence from the City Attorney and approval by the full Task Force.

Recommended Action

Review the City Attorney's memo and Revised Draft Vacant and Underdeveloped Parcels Technical Study and Approve the Revised Vacant and Underdeveloped Parcels Technical Study

FROM: Mary Anne Wagner, City Attorney

RE: Housing Element – Inclusion of Constrained Sites in Inventory of Land Suitable for Residential Development

DATE: April 21, 2011

Question Presented

You have asked whether or not the City is required to include certain types of constrained sites, specifically: 1) underwater parcels; 2) landlocked parcels; and/or 3) parcels that are developed with a historic building, in the resources inventory which is required in the City's Housing Element.

Short Answer

The City is only required to include parcels that are "suitable for residential development" in the inventory of resources in the Housing Element. City needs to evaluate each of the constrained parcels and make a determination regarding its suitability for residential development – if the parcel is suitable for residential development it should be included in the inventory.

Discussion

Pursuant to California Government Code Section 65583(a)¹ the housing element prepared by the City must contain an assessment of housing needs and an inventory of resources and constraints relevant to the meeting of these needs. The assessment and inventory must include an inventory of **land suitable for residential development**, including vacant sites and sites having potential for redevelopment, and an analysis of the relationship of zoning and public facilities and services to these sites. Section 65583(a)(3) (emphasis added).

Land suitable for residential development includes:

- Vacant sites zoned for residential use.
- Vacant sites zoned for nonresidential use that allows residential development.
- Residentially zoned sites that are capable of being developed at a higher density

¹ All statutory references in this memorandum are to the California Government Code.

- Sites zoned for nonresidential use that can be redeveloped for, and as necessary, rezoned for, residential use.

Section 65583.2(a).

The inventory of land must include all of the following:

- A listing of properties by parcel number or other unique reference.
- The size of each property listed and the general plan designation and zoning of each property.
- For nonvacant sites, a description of the existing use of each property.
- A general description of any environmental constraints to the development of housing within the jurisdiction, the documentation for which has been made available to the jurisdiction. This information need not be identified on a site-specific basis.
- A general description of existing or planned water, sewer, and other dry utilities supply, including the availability and access to distribution facilities. This information need not be identified on a site-specific basis.
- Sites identified as available for housing for above moderate-income households in areas not served by public sewer systems. This information need not be identified on a site-specific basis.
- A map that shows the location of the sites included in the inventory, such as the land use map from the jurisdiction's general plan for reference purposes only.

Section 65583.2(b).

The statutes cited above do not address whether or not underwater parcels, landlocked parcels and/or parcels which are developed with historic buildings need to be included in the required inventory of "land suitable for residential development." The City needs to evaluate each type of constrained site and make a determination on whether or not the parcel(s) are suitable for residential development. There is, obviously, a strong argument that underwater parcels are not suitable for residential development. It would seem that the other types of constrained sites, landlocked parcels and parcels developed with historic structures would be more likely to be suitable for residential development – but they should all be evaluated and then the determination made. In the event that the City determines that parcels are not "suitable for residential development" and therefore elects not to include such parcels in the inventory I recommend that a separate document be created which identifies those parcels and the reasons why they were not include – this document should then be retained in the City's files for future reference.

Introduction

The housing element is required to identify specific sites or parcels that are available for residential development in the planning period in a land inventory. The land inventory is required to include an inventory and analysis of vacant parcels (i.e., those parcels which do not contain residential units and could potentially accommodate units based on the current General Plan and zoning regulations) and an inventory and analysis of underdeveloped parcels (i.e., those parcels which are not "built-out" and could potentially accommodate additional units based on the current General Plan and zoning regulations).

In Sausalito there are three single-family, two two-family and one multi-family residential zoning districts, three different commercial zoning districts which allow residential uses, a houseboat district and an arks district.

Zoning District	Sub-District	Minimum Lot Size	Maximum Density Allowed (unit/parcel area)
Single Family	R-1-20	20,000 square feet	1 unit/parcel
	R-1-8	8,000	1 unit/parcel
	R-1-6	6,000	1 unit/parcel
Two-Family	R-2-5	10,000	1 unit/5,000 square feet*
	R-2-2.5	5,000	1 unit/2,500 square feet*
Multi-Family	R-3	5,000	1 unit/1,500 square feet
Central Commercial	CC	5,000	1 unit/1,500 square feet
Commercial Residential	CR	5,000	1 unit/1,500 square feet
Neighborhood Commercial	CN-1, CN-2	5,000	1 unit/1,500 square feet
Houseboat	H	10,000	1 unit/10,000 square feet
Arks	A	1,500	1 unit/1,500 square feet

* If the parcel is "non-conforming," meaning that it is less than the minimum lot size, but greater than 1,500 square feet, the density allowed is 1 unit/1,500 square feet (Zoning Ordinance Section 10.40.030.D.2)

The other zoning districts in Sausalito— Public Parks (PP), Public Institutional (PI), Open Space (OS), Open Area (OA), Shopping Center (SC), Commercial Waterfront (CW), Waterfront (W) and Industrial Maranship (I-M)— do not allow residential uses.

Using information from the Marin County Assessor's Office which provided the street address, assessor's parcel number (APN), lot size, existing land use, number of existing units and zoning designation for each parcel in Sausalito, all "vacant" parcels in all Zoning Districts and all "underdeveloped" parcels in Zoning Districts which allow residential uses were inventoried. Then, each parcel was evaluated with regard to the current maximum density allowed in the respective zoning district. This report presents the results of the inventory and provides an analysis of each parcel.

The size of the potential unit was not taken into account—the inventory results portion of this report describes the maximum "paper potential" for vacant and underdeveloped parcels. In order to project a more realistic development capacity for the City a site constraint analysis based on lot slope, configuration and existing structures was performed on the maximum capacity analysis for vacant and underdeveloped parcels.

Methodology

Vacant Parcels Inventory

Using information from the Marin County Assessor's Office which provided the street address, assessor's parcel number, lot size, existing land use, number of existing units and zoning designation for each parcel in Sausalito, all vacant parcels were identified. Due to anomalies in the County's information, some of the "vacant" parcels were known to be developed parcels. Therefore, a visual survey of each parcel was required in order to determine if the parcel was actually vacant. Using MarinMaps, the County's Geographic Information System (GIS), each "vacant" parcel was located, and using both an aerial photograph layer and a building footprint layer, determined to be actually vacant or not.

During the visual survey it was found that in some cases parcels which contained structures that did not have housing units were inventoried as being not vacant. For example, a mere visual assessment of a parcel with an accessory structure, such as a garage or tool shed, without a housing unit would be determined to be not vacant. However, as there was not housing unit, that parcel should have been inventoried as being vacant. Therefore, each vacant parcel was crossed checked using the Marin County Assessor's Office information regarding the improvement value of each parcel. If there was a structure on the parcel, but the improvement value was less than \$200,000 and was not being coded as having a living unit, the parcel was inventoried as being vacant.

Single-Family Districts (R-1-6, R-1-8, R-1-20). In the single family zoning districts only one unit is allowed on a lot, regardless of the size of the lot (provided the lot is 1,500 square feet or larger). If the lot is smaller than 1,500 square feet, the property owner could request a variance from the minimum parcel size—however, the unit would be limited to a prescribed percentage of the lot area, and therefore, would be a small unit. For lots between 500-1,499 square feet, the size of the unit could range from 225-670 square feet in the most restrictive single family zoning district. For lots smaller than 500 square feet it is unlikely that a potential unit would be built due to maximum floor area and building coverage restrictions. For a 400 square foot parcel, for example, the maximum size of a home in the most restrictive zoning district would be 180 square feet. Therefore, the number of parcels and associated units were organized into three different categories:

Category	Potential Unit?	Classification
❖ Vacant parcels less than 500 square feet	Very small efficiency unit, possibly, if a variance was granted	Vacant Land
❖ Vacant parcels 500-1,499 square feet	Efficiency unit, possibly, if a variance was granted	Vacant Land
❖ Vacant parcels 1,500 square feet or larger	Yes, one unit	Vacant Land

Two-Family Districts (R-2-2.5, R-2-5). In the two family zoning districts the maximum number of units on any lot is based on the maximum density allowed. If the lot is at or larger than the minimum lot size it is "legal conforming" and in order to calculate the number of additional units that could be put on a given lot one would divide the lot size by the maximum density allowed. For R-2-5 parcels, the maximum density allowed is 1 unit/5,000 square feet of lot area. For R-2-2.5 parcels, the maximum density allowed is 1 unit/2,500 square feet of lot area. If the lot is smaller than the minimum lot size it is "legal non-conforming", and in order to calculate the

number of additional units that could be put on a given lot one would multiply the lot size by 1 unit/1,500 square feet. Similar to the single family districts, the number of vacant parcels in R-2 zoning districts were organized into three different categories:

Category	Potential Unit?	Classification
❖ Vacant parcels less than 500 square feet	Very small efficiency unit, possibly, if a variance was granted	Vacant Land
❖ Vacant parcels 500-1,499 square feet	Efficiency unit, possibly, if a variance was granted	Vacant Land
❖ Vacant parcels 1,500 square feet or larger	Yes, number depends on lot size	Vacant Land

Multi-Family District (R-3). In the multi-family zoning districts the maximum number of units on any lot is based on the maximum density allowed (1 unit/1,500 square feet of lot area). Similar to the other residential zoning districts, the number of vacant parcels in R-3 zoning districts were organized into three different categories:

Category	Potential Unit?	Classification
❖ Vacant parcels less than 500 square feet	Very small efficiency unit, possibly, if a variance was granted	Vacant Land
❖ Vacant parcels 500-1,499 square feet	Efficiency unit, possibly, if a variance was granted	Vacant Land
❖ Vacant parcels 1,500 square feet or larger	Yes, number depends on lot size	Vacant Land

Commercial Mixed Use Districts (CC, CR, CN). In the commercial mixed use zoning districts the maximum number of units on any lot is based on the maximum density allowed. There are also restrictions on where the residential use is allowed (upper-floor only). In order to determine the maximum potential for additional residential units in commercial zoning districts the “paper potential” of additional units in each commercial zone was analyzed by multiplying the lot size by the maximum density requirements (1 unit/1,500 square feet of lot area). It should be noted that up to three units are principally permitted on commercial mixed use properties. Four or more units require a Conditional Use Permit.

Non-Residentially Zoned Parcels (PI, OS, OA, I, CW, W). The number of vacant non-residentially zoned parcels was inventoried. As residential uses are not allowed on these parcels, the number of potential units was zero for each parcel.

Underdeveloped Parcel Inventory

Using information from the Marin County Assessor’s Office which provides the street address, assessor’s parcel number, lot size, existing land use, number of existing units and zoning designation for each parcel in Sausalito, all underdeveloped parcels were inventoried.

Underdeveloped Single-Family. In the single family zoning districts only one unit is allowed on a lot, regardless of the size of the lot (provided the lot is 1,500 square feet or larger). Therefore, in order to determine how many additional units could be accommodated given the current zoning regulations, all of the single-family parcels were organized into two different categories:

Category	Additional Unit?	Classification
❖ Parcels 1,500 square feet or larger that have 1 or more unit	No, parcels are built out	Underdeveloped Parcels, Phase 1
❖ Parcels with an “unknown” lot size	Unknown	Underdeveloped Parcels, Phase 2

The vacant parcels were discarded as they were analyzed in the vacant parcel task. The parcels 1,500 square feet or larger that have 1 or more unit have no potential for additional units as the parcels are built out. These parcels were eliminated in the first phase of the underdeveloped parcels task. The parcels with an "unknown" lot size are those parcels that are in the County's tax records as having zero lot area. This is an anomaly in the County's system. In order to determine the lot size, a second underdeveloped parcels phase was initiated where each of the "unknown" parcels was individually researched to determine the lot size and number of existing units. Once the parcel size and number of units were known, the same methodology was applied as those parcels with known parcel sizes.

Underdeveloped Two-Family. In the two-family zoning districts the maximum number of units on any lot is based on the maximum density allowed.

Legal Conforming Lots: If the lot is at the minimum lot size it is "legal conforming." In order to calculate the number of additional units that could be put on a given lot one would divide the lot size by the maximum density allowed and subtract out the number of existing units. The result was rounded down.

Examples:

- ❖ For R-2-5 parcels, the maximum density allowed is 1 unit/5,000 square feet of lot area. If an example parcel with one unit in the R-2-5 zoning district is 13,000 square feet in area, the maximum number of additional units would be 1 additional unit:
(13,000 sf x 1 unit/ 5,000 sf = 2.6 units – 1 existing unit = 1 add'l unit)
- ❖ For R-2-2.5 parcels, the maximum density allowed is 1 unit/2,500 square feet of lot area. If an example parcel with one unit in the R-2-2.5 zoning district is 13,000 square feet in area, the maximum number of additional units would be 4 additional units:
(13,000 sf x 1 unit/ 2,500 sf = 5.2 units – 1 existing unit = 4 add'l units)

Legal Non-Conforming Lots: If the lot is smaller than the minimum lot size (it is "legal non-conforming"), and provided the lot is 1,500 square feet or larger, in order to calculate the number of additional units that could be put on a given lot one would multiply the lot size by 1 unit/1,500 square feet and subtract out the number of existing units. The result would be rounded down.

Examples:

- ❖ For non-conforming R-2-5 parcels (smaller than 10,000 square feet), the maximum density allowed is 1 unit/1,500 square feet of lot area. If an example parcel with one unit in the R-2-5 zoning district is 7,000 square feet in area, the maximum number of additional units would be 3 additional units:
(7,000 sf x 1 unit/ 1,500 sf = 4.6 units – 1 existing unit = 3 add'l units)
- ❖ For non-conforming R-2-2.5 parcels (smaller than 5,000 square feet), the maximum density allowed is 1 unit/1,500 square feet of lot area. If an example parcel with one unit in the R-2-2.5 zoning district is 3,000 square feet in area, the maximum number of additional units would be 1 additional unit:
(3,000 sf x 1 unit/ 1,500 sf = 2 units – 1 existing unit = 1 add'l unit)

Similar to the single-family districts, in order to determine how many additional units could be accommodated given the current zoning regulations, all of the two-family parcels were organized into three different categories:

Category	Additional Unit?	Classification
❖ Legal Conforming Parcels that have 1 or more unit	Yes, possibly, depending on lot size and number of existing units	Underdeveloped Parcels, Phase 1
❖ Legal Non-Conforming Parcels that have 1 or more unit	Yes, possibly, depending on lot size and number of existing units	Underdeveloped Parcels, Phase 1
❖ Parcels with an "unknown" lot size	Unknown. Once known, determined to be either (a) Vacant parcels 1,500 square feet or larger (b) Legal Conforming Parcels that have 1 or more unit or (c) Legal Non-Conforming Parcels that have 1 or more unit	Underdeveloped Parcels, Phase 2

The vacant parcels were discarded as they were analyzed in the vacant parcel task. The legal conforming and legal non-conforming parcels were analyzed during the first phase of the underdeveloped parcels task. The parcels with an "unknown" lot size are those parcels that are in the County's tax records as having zero lot area. This is an anomaly in the County's system. In order to determine the lot size, a second underdeveloped parcels phase was initiated where each of the "unknown" parcels was individually researched to determine the lot size and number of existing units. Once the parcel size and number of units was known, the parcel was determined to be either a (a) vacant parcel 1,500 square feet or larger, (b) legal Conforming Parcel that has 1 or more unit or (c) legal Non-Conforming Parcel that has 1 or more unit.

Underdeveloped Multi-Family. In the multi-family zoning districts the maximum number of units on any lot is based on the maximum density allowed.

If the lot is at the minimum lot size of 5,000 square feet and provided the lot is 1,500 square feet or larger, in order to calculate the number of additional units that could be put on a given lot one would multiply the lot size by the maximum density allowed and subtract out the number of existing units. The result would be rounded down.

Example:

- ❖ The maximum density allowed is 1 unit/1,500 square feet of lot area. If an example parcel with one unit in the R-3 zoning district is 5,000 square feet in area, the maximum number of additional units would be 2 additional units:

$$(5,000 \text{ sf} \times 1 \text{ unit} / 1,500 \text{ sf} = 3 \text{ units} - 1 \text{ existing unit} = 2 \text{ add'l units})$$

Similar to the single-family and two family districts, in order to determine how many additional units could be accommodated given the current zoning regulations, all of the multi-family parcels into were organized two different categories:

Category	Additional Unit?	Classification
❖ Parcels that have 1 or more unit	Yes, possibly, depending on lot size and number of existing units	Underdeveloped Parcels, Phase 1
❖ Parcels with an "unknown" lot size	Unknown	Underdeveloped Parcels, Phase 2

The vacant parcels were discarded as they were analyzed in the vacant parcel task. Parcels that had 1 or more unit were analyzed during the first phase of the underdeveloped parcels task. The parcels with an "unknown" lot size are those parcels that are in the County's tax records as having zero lot area. This is a glitch in the County's system. In order to determine the lot size, a

second underdeveloped parcels phase was initiated where each of the "unknown" parcels was individually researched to determine the lot size and number of existing units. Once the parcel size and number of units was known, the parcel was determined to be either a (a) vacant parcel 1,500 square feet or larger, (b) legal Conforming Parcel that has 1 or more unit or (c) legal Non-Conforming Parcel that has 1 or more unit.

Underdeveloped Commercial Mixed Use. In the commercial mixed use zoning districts the maximum number of units on any lot is based on the maximum density allowed. There are also restrictions on where the residential use is allowed (upper-floor only). In order to determine the maximum potential for additional residential units in commercial zoning districts the "paper potential" of additional units in each commercial zone was analyzed by dividing the lot size by the maximum density requirements and subtracting out any existing units.

Underdeveloped Houseboats. In the houseboat zoning district the maximum number of units on any lot is based on the maximum density allowed (one unit per 10,000 square feet of lot area). The "paper potential" of additional units in the houseboat zone was analyzed by dividing the lot size by the maximum density requirements and subtracting out any existing units.

Underdeveloped Arks. In the residential arks zoning districts the maximum number of units on any lot is based on the maximum density allowed (one unit per 1,500 square feet of lot area). The "paper potential" of additional units in the arks zone was analyzed by dividing the lot size by the maximum density requirements and subtracting out any existing units.

Inventory Results

Vacant Parcels¹

Residentially Zoned Vacant Parcels (R-1, R-2, R-3). In the R-1 zoning districts there are 77 vacant parcels. Of those parcels, 62 are 1,500 square feet or larger, therefore, there is potential for 62 housing units. Out of the remaining 15 parcels, all are between 500-1,499 square feet, therefore, there is potential for 15 additional small housing units if variances from the minimum parcel sizes were granted. The parcels were under 300 square feet in area and were discarded as they were assumed to be too small for development.

In the R-2 zoning districts there are 42 vacant parcels. Of those parcels, 23 are 1,500 square feet or larger and therefore, there is potential for 64 housing units. Out of the remaining 19 parcels, 13 are between 500-1,499 square feet and there is potential for 13 additional small housing units if variances from the minimum parcel sizes were granted. There are another 6 parcels between 300-499 square feet, and therefore, there is potential for 6 additional very small housing units if variances from the minimum parcel sizes were granted for the units. The remaining were under 300 square feet in area and were discarded as they were assumed to be too small for development.

In the R-3 zoning district there are 13 vacant parcels. Of those parcels, 10 are 1,500 square feet or larger and therefore, there is potential for 28 housing units. Out of the remaining 3 parcels, 3 are between 500-1,499 square feet and there is potential for 3 additional small housing units if variances from the minimum parcel sizes were granted. The remaining parcels were under 300 square feet in area and were discarded as they were assumed to be too small for development.

See **Appendix A** for data on vacant residentially-zoned parcels.

Mixed Use Zoned Vacant Parcels (CC, CR, CN). In the CC zoning district there is 1 vacant parcel of about 11,000 square feet. Based on the density allowed in the CC zoning district, there are 7 potential units which could be built on this parcel.

In the CR zoning district there are no vacant parcels and therefore no potential for any housing units.

In the CN-1 zoning district there are 3 vacant parcels. Of those parcels, 1 is about 1,800 square feet and therefore, there is potential for 1 housing unit. Out of the remaining 2 parcels, 1 is between 500-1,499 square feet and there is potential for 1 additional small housing unit if a variance from the minimum parcel size was granted. There is another parcel between 1-499 square feet, and therefore, there is potential for 1 additional very small housing unit if a variance from the minimum parcel size was granted for the unit.

In the CN-2 zoning district there is 1 vacant parcel which is about 800 square feet. Therefore, there is potential for 1 additional small housing unit if a variance from the minimum parcel size was granted for the unit.

See **Appendix B** for data on vacant mixed use-zoned parcels.

¹ Vacant water parcels were eliminated from the list of vacant parcels as water parcels are neither suitable nor available for development. Vacant landlocked parcels (i.e., those parcels which do not currently have access to either a private or public roadway) were included in the inventory as they have potential for access being granted and may be both suitable and/or available for development of housing.

Non-Residentially Zoned Vacant Parcels (PI, OS, OA, I, CW, W). In the non-residentially zoned districts residential use is not allowed. Therefore, there is currently no potential for additional housing units in these zones. See **Appendix C** for data on vacant non-residentially zoned parcels.

Underdeveloped Parcels²

Underdeveloped Single-Family. There are no “underdeveloped” parcels in the R-1 zoning districts-- the 939 parcels are built out and cannot accommodate any additional units. As the single-family districts only allow one unit per parcel, the parcels are either developed or vacant. Therefore, there is no additional capacity in the R-1 zoning districts in terms of underdeveloped parcels.

Underdeveloped Two-Family. In the R-2 zoning districts there are 332 parcels which are underdeveloped. Of these parcels, there is potential for 426 additional housing units (see **Appendix D** for data).

Underdeveloped Multi-Family. In the R-3 zoning districts there are 158 parcels which are underdeveloped. Of these parcels, there is potential for 338 additional housing units (see **Appendix E** for data).

Underdeveloped Commercial Mixed Use. In the mixed use commercial zoning districts there are 94 parcels which are underdeveloped. Of these parcels, there is the potential for 368 additional housing units (see **Appendix F** for data).

Underdeveloped Houseboats. There are five parcels in the houseboat zoning district. Of these five parcels, there is potential for 15 additional houseboats (see **Appendix G** for data).

Underdeveloped Arks. There are seven parcels in the residential arks zoning district. Each parcel is less than 3,000 square feet and contains a single-family ark. Therefore, there is no capacity for additional arks (see **Appendix H** for data).

² Existing condominiums were eliminated from the underdeveloped parcels list as the Marin County's GIS system included each condominium address as having its own parcel area. Properties which contain older homes, or those with noteworthy structures, remained on the list as they have the potential for additional units.

Summary of Inventory Results

Vacant Parcels

Residentially Zoned Vacant Parcels- Results Summary				
Zoning District		Number of Parcels	Number of Potential Units	
			Variance Required	No Variance Required
R-1-6				
Parcel Size (square feet)	300-499	0	0	0
	500-1499	11	11	0
	1500+	33	0	33

Site Constraints Analysis

The inventory results in the previous section provide the maximum number of additional housing units that could be developed in the City. State Housing Element law requires, as part of the analysis of available sites, a local government to demonstrate the projected residential development capacity of the sites identified in the housing element can realistically be achieved. The number of units calculated must be adjusted as necessary, based on the land use controls and site improvements requirements. In order to project a more realistic development capacity for the City, a site constraints analysis based on lot slope, configuration and existing structures was performed on the preceding maximum capacity analysis for vacant and underdeveloped parcels.

Vacant Parcels

For residential zoning districts the vacant parcels³ were divided into three categories based on lot size:

- Less than 3,000 square feet
- 3,000-9,999 square feet
- 10,000 square feet and greater

For the residential zoning districts ten parcels from each category were randomly selected for analysis. Using the Marin County Assessor's office GIS system, each sample parcel was reviewed for existing parcel configuration, slope conditions and access. A determination was made based on existing development standards (i.e., building coverage and floor area ratio limitations) whether or not unit(s) could be developed on the sample parcels. The total number of projected units for the selected sample parcels was then divided by the total number of adjusted units for the sample parcels to establish an "adjusted development capacity ratio". This ratio was then applied to the total number of projected units in the vacant parcels category for the respective residential zoning districts.

Residentially Zoned Vacant Parcels (R-1, R-2, R-3).

Parcel Size Category (Square Feet)	Total Sample Parcels Selected	Total Sample Potential Units on Selected Parcels	Total Sample Adjusted Units	Adjusted Development Capacity Ratio	Total Number of Potential Units	Number of Adjusted Units
Less than 3,000	10	10	1	0.10	57	5
3,000-9,999	10	11	6	0.55	83	45
10,000 and greater	10	27	9	0.33	51	16
Totals					191	66

Therefore, the adjusted capacity for development on residentially zoned (R-1, R-2 and R-3) vacant parcels taking into account typical development constraints is **66 additional units**.

For mixed use zoning districts no lot size categories were assigned as only four vacant parcels were identified. Each parcel was reviewed for existing parcel configuration, slope conditions and access. A determination was made based on existing development standards (i.e., building

³ Vacant water parcels were eliminated from the list of vacant parcels as water parcels are neither suitable nor available for development. Vacant landlocked parcels (i.e., those parcels which do not currently have access to either a private or public roadway) were included in the inventory as they have potential for access being granted and may be both suitable and/or available for development of housing.

coverage and floor area ratio limitations) whether or not unit(s) could be developed on the parcels.

Mixed Use Zoned Vacant Parcels (CC, CR, CN).

Assessor Parcel Number	Total Number of Potential Units	Site Constraint Notes	Number of Adjusted Units
065-267-29	1	Requires a Variance; parcel under 300 square feet	0
063-151-04	1	No units can be placed here per Zoning Ordinance	0
065-267-38	1	Parcel is landlocked and very small	0
065-063-12	7	Parcel could accommodate maximum density	7
Total Potential Units	10	Total Adjusted Units	7

Therefore, the adjusted capacity for development on mixed use zoned vacant parcels taking into account typical development constraints is **7 additional units**.

Underdeveloped Parcels

For residential zoning districts (R-1, R-2 and R-3) the underdeveloped parcels⁴ were divided into three categories based on lot size:

- Less than 5,000 square feet
- 5,000-9,999 square feet
- 10,000 square feet and greater

Ten parcels from each category were randomly selected for analysis (for mixed use districts no categories were assigned). Using the Marin County Assessor's office GIS system, each sample parcel was reviewed for existing parcel configuration, slope conditions and access. A determination was made based on existing development standards (i.e., building coverage and floor area ratio limitations), the location and size of the existing structure(s), and parking considerations whether or not additional units could be developed on the sample site. The total number of projected units for the selected sample parcels was then divided by the total number of adjusted units for the sample parcels to establish an "adjusted development capacity ratio". This ratio was then applied to the total number of projected units in the underdeveloped parcels category for both the residential and mixed use zoning districts.

Residentially Zoned Underdeveloped Parcels (R-1, R-2, R-3).

Parcel Size Category	Total Sample Parcels Selected	Total Sample Potential Units on Selected Parcels	Total Sample Adjusted Units	Adjusted Development Capacity Ratio	Total Number of Potential Units	Number of Adjusted Units
Less than 5,000 square feet	10	11	3	0.27	246	67
5,000-9,999 square feet	10	16	4	0.25	330	83
10,000 square feet and greater	10	35	11	0.31	188	60
Totals					764	210

⁴ Existing condominiums were eliminated from the underdeveloped parcels list as the Marin County's GIS system included each condominium address as having its own parcel area. Properties which contain older homes, or those with noteworthy structures, remained on the list as they have the potential for additional units.

Therefore, the adjusted capacity for development on residentially zoned (R-1, R-2, R-3) underdeveloped parcels taking into account typical development constraints is **210 additional units**.

Mixed Use Zoned Underdeveloped Parcels (CC, CR, CN).

Total Sample Parcels Selected	Total Sample Potential Units	Total Sample Adjusted Units	Adjusted Development Capacity Ratio	Total Number of Potential Units	Number of Adjusted Units
10	40	15	0.38	368	139

Therefore, the adjusted capacity for development on mixed use zoned underdeveloped parcels taking into account typical development constraints is **139 additional units**.
